The Origins of Grammar Kathy Hirsh-Pasek, Roberta M. Golinkoff, 1996 How do children achieve adult grammatical competence How do they induce syntactical rules from the bewildering linguistic input that surrounds them The major debates in language acquisition theory today focus not on whether there are some sensitivities to syntactic information but rather which sensitivities are available to children and how they might be translated into the organizing principles that get syntactic learning off the ground The Origins of Grammar presents a synthesis of work done by the authors who have pioneered one of the most important methodological advances in language learning in the past decade the intermodal preferential looking paradigm which can be used to assess lexical and syntactic knowledge in children as young as 13 months In addition to drawing together their groundbreaking empirical work the authors use these results to describe a theory of language

learning that emphasizes the role of multiple cues and forces in development They show how infants shift their reliance on different aspects of the linguistic input moving from a bias to attend to prosodic information to a reliance on semantic information and finally to a reliance on the syntax itself Viewing language acquisition as the product of a biased learner who takes advantage of the information available from a variety of sources in his or her environment The Origins of Grammar provides a new way of thinking about the process of language comprehension The analysis borrows insights from theories about the development of mental models models of early cognitive development and systems theory and is presented in a way that will be accessible to cognitive and developmental psychologists

Language acquisition research is challenging the intricate behavioral and cognitive foundations of speech are difficult to measure objectively The audible components of speech however are quantifiable and thus provide crucial data This practical guide synthesizes the authors decades of experience into a comprehensive set of tools that will allow students and early career researchers in the field to design and conduct rigorous studies that produce reliable and valid speech data and interpretations The authors thoroughly review specific techniques for obtaining qualitative and quantitative speech data including how to tailor the testing environments for optimal results They explore observational tasks for collecting natural speech and experimental tasks for eliciting specific types of speech Language comprehension tasks are also reviewed so researchers can study participants interpretations of speech and conceptualizations of grammar Most tasks are oriented

towards children but special considerations for infants are also reviewed as well as multilingual children Chapters also provide strategies for transcribing and coding raw speech data into reliable data sets that can be scientifically analyzed Furthermore they investigate the intricacies of interpretation so that researchers can make empirically sound inferences from their data and avoid common pitfalls that can lead to unscientific conclusions [Language across neurodevelopmental disorders](#) Marisa Filipe,Lénia Carvalhais,Leonard Abbeduto,Sónia Frota,2023-03-13 [The Development of Language](#) Jean Berko Gleason,2005 The sixth edition of The Development of Language written and contributed by leading researchers covers language acquisition and development from infancy through adulthood This authoritative text is ideal for courses that take a developmental approach to language acquisition across the life span Highlights of the Sixth Edition Expanded chapter on atypical language development Chapter 9 contains new information about cochlear implants current research on the autism spectrum disorders new therapeutic approaches to atypical language and recent claims regarding the etiology of atypicality Includes contemporary topics such as adopted foreign children s language acquisition and genetic basis for language that encourage topical discussions Updated with new material on the brain and advances in the treatment of language disorders ensuring student awareness of current discoveries New information on using computers and the Internet in research on language development Expanded information on the use of the Child Language Data Exchange System which is now Web based Communication Disorders Supersite Students now have access to all of this site s quizzes links and resources to help them prepare for their tests papers and exams For more information visit www.ablongman.com/commdisorders Don t Miss This Special Value Pack Option Research Navigator TM for the Helping Professions Research Navigator TM can be your best friend when you re facing a large research project Especially helpful with the toughest challenge getting started Research Navigator TM offers a comprehensive step by step walk through of the research process along with access to some of the most respected source databases available Access to Research Navigator TM a 15 value is FREE when packaged with any new Social Work textbook If your text did not come packaged with Research Navigator TM look for it in your bookstore or visit <http://www.researchnavigator.com> today to purchase immediate access Contact your local Allyn Bacon representative and request special packaging codes to take advantage of these great offers [Learning Language through Task Repetition](#) Martin Bygate,2018-09-15 After more than 20 years of research this is the first book length treatment of second language task repetition the repetition of encounters with a task that involve re using the same content with the same overall purpose The topic links task performance with the growing mastery of both the task and of relevant language and constitutes a site with special potential to promote learning within and across language lessons and for preparing students for assessment and of course real world language performance The volume assembles chapters that complement each other in interesting ways significant background reviews studies of patterns of change across task repetition iterations and reports on the use and nature of task repetition in language classes in on going programmes
