Debates in Design and Technology Education Alison Hardy, 2022-12-27

Design and technology is a relatively new subject compared to more traditional subjects and during its brief existence it has garnered widespread debate in schools. This book aims to explore some of these debates and challenges the reader with new perspectives about the subject by presenting and questioning arguments about the purpose, content and place of design and technology in the school curriculum. It will encourage the reader to critically reflect on their own beliefs and practices to reach informed judgements and perspectives that will affect how they teach and think about design and technology. Exploring the major issues that design and technology teachers encounter in their professional lives as well as introducing new topics they may never have considered before, this comprehensive second edition has been fully updated with 16 chapters focusing on emerging and enduring debates. How do we do race in design and technology? What's so special about design and technology anyway? What is design cognition in design and technology classrooms? What is the potential of feedback in the creative processes of a design and technology classroom? Does food fit in design and technology? What is the role of making in design and technology? With its combination of expert opinion and fresh insight, *Debates in Design and Technology Education* is the ideal companion for any student or practising teacher engaged in initial training, continuing professional development or master's level study.

Food and Cooking Skills Education Anita Tull, 2018-01-29

Food and Cooking Skills Education FCSE is a complex mix of policy and practicality, educational theory and pedagogy, classroom and government policy. This book shows how FCSE has been at the centre of a tussle between education and policy for decades. It reviews how FCSE has grappled with various significant issues of concern that threaten to marginalise it and pose problems for educational practicalities as expectations are increased but resources are squeezed. It assesses the debate about the significance and importance of acquiring practical food and cooking skills in a society where the purchase of ready-made food has become commonplace and public knowledge of where our food comes from is noticeably lacking. This has contributed to the escalating incidence of diet-related diseases and the attendant cost to society and threatened environmental sustainability. In turn, governments have reacted by proposals to make practical cooking skills a statutory National Curriculum subject as part of the armoury for tackling such costs. Based on detailed research conducted across England and Wales as well as comparisons with thirty-five other countries or states, the author makes recommendations for policy to manage this challenge facing contemporary society.
