Flexible Automation in Japan J. Hartley, 2013-04-09 Much has been said and written about Japan's manufacturing prowess Most of the comment comes from people who are merely visitors to the country and can be best classified as observers looking in from the outside Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists Neither of these limitations apply to John Hartley who has been resident in Japan for the past five years He understands the culture can speak the language and has extensive contacts at the highest level Therefore he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology This he has been doing on a regular basis to IFS magazines The Industrial Robot Assembly Automation Sensor Review and The FMS Magazine Most of the material in this book is from John Hartley's pen and represents his most significant contributions on flexible automation in Japan to these journals over the last three years It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry

Manufacturing Technology Transfer Yasuo Yamane, Tom Childs, 2018-10-08 Based on a bestselling book originally published in Japanese *Manufacturing Technology Transfer A Japanese Monozukuri View of Needs and Strategies* offers time tested methods and little known tips for achieving successful transfer of technology along with the skills required to operate that technology Designed to support a series of lectures on technology transfer within a master's course on the management of technology it presents the results of years of research carried out at Hiroshima University The book delves into the authors' decades of experience transferring technology between Japan and the rest of the world

particularly to developing countries from where much of the world's future economic growth is expected. It contains case studies of successful technology transfers from both the ship building and food equipment industries. Its wide reaching coverage examines methods of skill transfer, production management and manufacturing company classification. Introducing readers to the engineering activities that occur within the manufacturing industry, the book illustrates the engineering technology activities involved in manufacturing along with the production management activities required to support them. It also explains how job simulators can help shorten learning times in the manufacturing industry in the same way that flight simulators are used to teach flying skills to pilots. The book outlines a framework for teaching and learning processes that can be visualized in terms of an S shaped learning curve. It explains how technology transfer overseas should be supported by contractual agreements between the parties concerned. Detailing the legal contractual responsibilities for all parties involved, it also describes what you should do if problems arise during the transfer. Integrating previously unpublished research results with illustrative case studies, this book is suitable for a wide audience within the manufacturing industry including manufacturing engineering students in both developed and developing countries, those responsible for the development of manufacturing engineers in industry and elsewhere, and anyone interested in the international activities of Japanese manufacturing companies.

High-Speed Machining Kapil Gupta, J. Paulo Davim, 2020-01-31. High Speed Machining covers every aspect of this important subject from the basic mechanisms of the technology right through to possible avenues for future research. This book will help readers choose the best method for their particular task, how to set up their equipment to reduce chatter and wear, and how to use simulation tools to model high speed machining processes. The different applications of each technology are discussed throughout, as are the latest findings by leading researchers in this field. For any researcher looking to understand this topic, any manufacturer looking to improve performance, or any manager looking to upgrade their plant, this is the most comprehensive and authoritative guide available. Summarizes important R D from around the world focusing on emerging topics like intelligent machining. Explains the latest best practice for the optimization of high speed machining processes for greater energy efficiency and machining precision. Provides practical advice on the testing and monitoring of HSM machines, drawing on practices from leading companies.
