**Biochimie métabolique** Jacques Borg, André Reeber, 2008 L'apprentissage de la Biochimie métabolique est une étape cruciale dans la formation des étudiants en Sciences de la Santé Cette matière concerne en particulier la production et le stockage de l'énergie d'une part et la biosynthèse de macromolécules d'autre part Dans la 2e édition de cet ouvrage l'accent est mis sur le métabolisme intermédiaire et sur l'intégration des métabolismes Ce chapitre est souvent insuffisamment traité bien que cette vision transversale des voies métaboliques soit un préalable indispensable à la compréhension des mécanismes physiopathologiques Des aperçus de physiologie biochimique sont présentés afin de suggérer les interactions étroites entre la Biochimie du premier cycle et la pathologie humaine Ces aperçus facilitent la transition vers les matières enseignées au deuxième cycle Ils sont aisément repérables car présentés dans des cadres gris L'iconographie de l'ouvrage est développée afin de faciliter la compréhension de la matière par de jeunes étudiants Des rappels de structure sont destinés à clarifier la compréhension des termes utilisés et le mécanisme des réactions décrites Enfin chaque chapitre se termine par une séance d'évaluation à l'aide de QCM Cet ouvrage devrait constituer un outil complémentaire aux cours de premier cycle

lipides Robert Azerad, Edgar Lederer, 1974 Lipid metabolism, 2000 **Le Métabolisme des lipides dans les plantes supérieures** P. Mazliak, 1968 Lipid Biochemistry: An Introduction M. I. Gurr, 1980-10-30 In the preface to the Second edition we made a prediction that many exciting developments would take place in the coming years that would change the face of a new edition This has indeed been the case and the current edition reflects these new advances Our picture of the structure of the fatty acid synthetase has changed dramatically bringing a new concept in enzymology the multicatalytic polypeptide chain This new knowledge owes much to the exploitation of genetic mutants the use of which is undoubtedly going to extend into many other areas of lipid biochemistry An understanding of the control of lipid metabolism has also advanced considerably during the last decade and we have tried to reflect that here although it will be some years before a truly integrated picture can be obtained For this reason we have continued to deal with the control of particular aspects of lipid metabolism fatty acids triacylglycerols lipoprotein in the specific chapters but we can foresee the time when a chapter

on the overall integration of lipid metabolism will be appropriate and feasible As a particular example the exciting new concepts of the control of cholesterol metabolism in specific tissues via the interaction of low density lipoproteins with cell surface receptors have been described in Chapter 6
