#### **Methods in Lignin Chemistry** Stephen Y.

Lin,Carlton W. Dence,2012-12-06 The structural complexity of lignin has continually challenged the ingenuity of researchers to develop suitable methods for its characterization prior to and following a wide variety of chemical biological and physical treatments Initially activity along these lines was fueled by a desire to interpret technical delignification Le pulping processes in terms of accompanying structural changes in the lignin Subsequently increasingly wide ranging in depth investigations on the structure and reactivity of lignin exposed the inadequacy of many of the methods currently in use and underscored the ever continuing need to develop new methods capable of solving the unique analytical problems associated with lignin Characteristically such methods should be selective sensitive suitable for quantitative measurements and capable of being applied directly to and without destruction of the lignin or lignocellulose sample One notable example of the headway being made in reaching this objective is the relatively recent development and refinement of methods based on the use of sophisticated instrumentation e g  $^1\text{H}$  and  $^{13}\text{C}$  NMR spectroscopy Although the utility of many of these and other recently developed methods described in this book has yet to be fully and satisfactorily exploited we believe that progress already made in this direction will continue and most likely accelerate The decision to produce this book was prompted mainly by the acknowledged need for an up to date single source compilation of lignin methodology Hitherto this need was in part satisfied by B L
