Methods in Cell Biology, 1974-03-11 **Methods in Cell Biology Bacterial, Phage and Molecular Genetics U.**

Winkler, W. Rüger, W. Wackernagel, 2012-12-06 During the mid forties bacteria and phages were discovered to be suitable objects for the study of genetic phenomena such as mutation and recombination which had already been known in eukaryotes for a long time were now shown to exist in bacteria and phages as well New phenomena as lysogeny and transduction were discovered which gained great importance beyond the field of microbial genetics Bacteria and phages are of small size multiply rapidly and have chemically defined growth requirements Many selective procedures can be applied to screen for rarely occurring mutants

RNA Polymerase and Associated Factors, Part C Sankar Adhya, Susan

Garges, 2003-12-18 RNA polymerase is a molecule important to gene transcription Along with associated factors RNA polymerase is part of the process in which RNA is transcribed to produce a protein Construction and purification of RNA polymerases DNA microarrays and bacterial gene expression Functional analysis of transcription factors Carbohydrate Chemistry John F Kennedy, 2007-10-31 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates Coverage of topics such as nucleosides amino sugars alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis Cell Biology A Comprehensive Treatise V4 David M. Prescott, 2012-12-02 Cell Biology A Comprehensive Treatise Volume 4 Gene Expression Translation and the Behavior of Proteins discusses the translation of genetic information into proteins It also explains the activities and behaviors of proteins which is the final stage of gene expression This book opens with a discussion of the components and mechanism of the translational machinery their structures biogenesis and cellular levels It then explains the protein synthesis wherein each chapter focuses on one aspect of the detailed process Other topics covered in this book are the structure and function of cytoplasmic ribonucleoprotein complexes and the proteolytic cleavage in the posttranslational processing of proteins This

text also covers the regulation of enzyme activity and the movement of material between nucleus and cytoplasm The last three chapters are more in depth discussions on protein synthesis intracellular transport regulation and secretion As with the other volumes of this book series readers will definitely benefit from the vast information provided in this book regarding protein its activities behaviors and synthesis **Proteins and Nucleic Acids** Abraham Marcus,2014-05-10 The Biochemistry of Plants A Comprehensive Treatise Volume 6 Proteins and Nucleic Acids provides information pertinent to the nucleic acids and the regulation of the expression of this information This book presents the processes by which the nucleic acids are finally expressed as proteins Organized into 14 chapters this volume begins with an overview of the overall structure of eukaryotic genomes with emphasis on higher plant DNA This text then examines the enzymes involved in the cleavage and degradation of DNA Other chapters provide a critical assessment of eukaryotic nucleic acid polymerases This book discusses as well some examples from plant mitochondrial systems The final chapter deals with two special areas of plant biology where the expression of the nucleic acids is seen in striking relief the formation of plant tumors and the growth and expression of plant viruses This book is a valuable resource for plant biochemists molecular biologists senior graduate students and research workers **Biochemistry of Brain** Sudhir Kumar,2013-10-22 Biochemistry of Brain is a collection of articles dealing with the developments in the biochemistry of the brain This book gives a comprehensive and critical discussion of important developments in studies concerning the above subject This text discusses the structure function and metabolism of glycosphingolipids which are related to the study of sphingolipid storage diseases Inborn defects of metabolism are found in Gaucher s and Fabry s disease which are characterized by lipid accumulation in the brain Another paper reviews the chemical and genetics of critically lysosomal hydrolase deficiencies that can cause the storage of sphingolipids This book then explains the role of myelin basic protein in lipids in vivo that the weak bonding of the protein is not a major component of myelin stability Another paper discusses the procedures for isolating subfractions of myelin and myelin related membranes with some attention given on the alterations in the subfractionation of myelin in pathological hypomyelinating and demyelinating conditions Another article discusses the biochemical and enzymatic composition of lysosomes and the biosynthesis intracellular transport storage and the degradation of lysosomal constituents This collection of papers will benefit scientists doing research in microbiology microchemistry molecular genetics and neurochemistry
