Methods of Interregional and Regional Analysis Walter Isard, Iwan J. Azis, Matthew P. Drennan, Ronald E. Miller, Sidney Saltzman, Erik Thorbecke, 2017-07-05 This landmark textbook introduces students to the principles of regional science and focuses on the key methods used in regional analysis including regional and interregional input output analysis econometrics regional and spatial programming and industrial and urban complex analysis gravity and spatial interaction models SAM and social accounting welfare analysis and applied general interregional equilibrium models The coherent development of the materials contained in the set of chapters provides students with a comprehensive background and understanding of how to investigate key regional problems For the research scholar this publication constitutes an up to date source book of the basic elements of each major regional science technique More significant it points to new directions for future research and ways interregional and regional analytic approaches can be fused to realise much more probing attacks on regional and spatial problems a contribution far beyond what is available in the literature

Methods of regional analysis Walter Isard, 1966 *History of Regional Science and the Regional Science Association International* Walter Isard, 2012-12-06 It is difficult if not impossible to establish the point of time at which a new field of study starts to emerge While the date of formal organization of a society associated with the field can be precisely stated such timing says little about when and where the seeds for a field's development were planted Also such timing says little about the essential why for the development of a field and provides little understanding of the path that it traced It is clear that the emergence of the field of regional science like many other fields was dependent on a particular setting as well as the pattern of events and interaction of diverse personalities who became involved As best I can I shall attempt in this Part I of the History to unravel the where when and why questions in the development of Regional Science and the Regional Science Association International Further in the last section of this essay I shall briefly point up some potentialities for analytical advances in the field of regional science Also I shall note the opportunity for leadership by regional scientists in attacking global and regional development problems thereby to help formulate relevant policy In this way I hope to expose the potential for fruitful research by young scholars interested in entering the field

Rogers, 2018-05-21. This book tells the eighty-year story of the author's life in America and abroad. He attended local schools in Berkeley and upon graduation from Berkeley High School in 1955 enrolled at the University of California, graduating with a degree in architecture in 1960. He then obtained a PhD in city and regional planning at the University of North Carolina, Chapel Hill, and returned to Berkeley in 1964 to join the faculty of its department of that name. After an academic career of some fifty years in departments of planning, engineering, and geography, he retired from teaching in 2008 at the University of Colorado in Boulder and became a senior research scholar in the Population Program, which he directed for twenty years at the university's Institute of Behavioral Science. The Dynamics of Regions and Networks in Industrial Ecosystems Matthias

Ruth, Brynhildur Davidsdottir, 2009-01-01. Industrial ecology provides a rigorous and comprehensive description of human production and consumption processes in the larger context of environmental and socioeconomic change. This volume offers methodologies for such descriptions with contributions covering both basic and advanced analytical concepts and tools to explore the dynamics of industrial ecosystems, concentrating specifically on regions and networks. Each of the book's three parts contains an introduction by a leader in the field as well as chapters ranging from conceptual models to case study applications. The first part offers an introduction to the main themes and issues surrounding regional and networked industrial ecosystems. The subsequent two parts broaden and deepen the discussion with emphasis on the regional and network characters relevant for analysis and management. The scale of issues ranges from buildings to regions to entire nations with methods that range from input-output analysis to computer-assisted simulation games. Researchers in the fields of industrial ecology, ecological economics, environmental and energy policy, environmental engineering, and resource and environmental economics will find this comprehensive book of great interest. Economic Impact Analysis: Methodology and Applications S. Pleeter, 2012-12-06

As a result of a contract awarded by the Construction Engineering Research Laboratory, U.S. Army Corps of Engineers and the Environmental Protection Agency, a workshop on the methodology of economic impact analysis was held at Hueston Woods State Park Lodge in Oxford, Ohio, April 13-15, 1977. Leading researchers in regional modeling were gathered to take stock of current developments in the field and to put forth new ideas and directions for research. Also attending the workshops were individuals from various governmental agencies that use regional models and economic impact statements. Preliminary versions of the papers appearing in this volume served as focal points for discussions that have hopefully continued stimulating further thinking of

the problems addressed The objectives of the conference were not only to explore recent developments in methodology but also to expose users of economic impact analyses to a wide variety of models and applications and to acquaint academicians with the needs of users The papers appearing in this volume represent only a portion of the output of this workshop
