Cacioppo, 2015-04-15 The Oxford Handbook of Social Neuroscience marks the emergence of a third broad perspective in neuroscience This perspective emphasizes the functions that emerge through the coaction and interaction of conspecifics the neural mechanisms that underlie these functions and the commonality and differences across social species and superorganismal structures **Neuroscience of Prejudice and Intergroup**

Relations Belle Derks, Daan Scheepers, Naomi Ellemers, 2013-06-19 Psychological research on the origins and consequences of prejudice discrimination and stereotyping has moved into previously uncharted directions through the introduction of neuroscientific measures Psychologists can now address issues that are difficult to examine with traditional methodologies

and monitor motivational and emotional as they develop during ongoing intergroup interactions thus enabling the empirical investigation of the fundamental biological bases of prejudice However several very promising strands of research have largely developed independently of each other By bringing together the work of leading prejudice researchers from across the world who have begun to study this field with different neuroscientific tools this volume provides the first integrated view on the specific drawbacks and benefits of each type of measure illuminates how standard paradigms in research on prejudice and intergroup relations can be adapted for the use of neuroscientific methods and illustrates how different methodologies can complement each other and be combined to advance current insights into the nature of prejudice This cutting edge volume will be of interest to advanced undergraduates graduates and researchers students who study prejudice intergroup relations and social neuroscience

Social Neuroscience John T. Cacioppo, Penny S. Visser, Cynthia L. Pickett, 2006 Social neuroscience uses the methodologies and tools developed to measure mental and brain function to study social cognition emotion and behavior In this collection John Cacioppo Penny Visser and Cynthia Pickett have brought together contributions from psychologists neurobiologists psychiatrists radiologists and neurologists that focus on the neurobiological underpinnings of social information processing particularly the mechanisms underlying people thinking about thinking people In these studies such methods as functional brain imaging studies of brain lesion patients comparative analyses and developmental data are brought to bear on social thinking and feeling systems the ways in which human beings influence and are influenced by other humans The broad range of disciplines represented by the contributors confirms that among the strengths of social neuroscience are its interdisciplinary approach and the use of multiple methods that bridge disciplines and levels of analysis Social neuroscience has yielded insights into such aspects of social behavior as social regulation social rejection impression formation self awareness and attitudes regarding social groups The studies in Social Neuroscience examine topics including the neural substrates of self awareness and social cognition theory of mind cortical mechanisms of language processing stereotyping prejudice and race and the special quality of social cognition

Social Neuroscience Alexander Todorov, Susan Fiske, Deborah Prentice, 2011-02-11 The field of social cognitive neuroscience has captured the attention of many researchers during the past ten years Much of the impetus for this new field came from the development of functional neuroimaging methods that made it possible to unobtrusively measure brain activation over time Using these methods over the last 30 years has allowed psychologists to move from simple validation questions would flashing stimuli activate the visual cortex to those about the functional specialization of brain regions are there regions in the inferior temporal cortex dedicated to face processing to questions that just a decade ago would have been considered to be intractable at such a level of analysis These so called intractable questions are the focus of the chapters in this book which introduces social cognitive neuroscience research addressing questions of fundamental importance to social psychology How do we understand and represent other people How do we represent social groups How do we regulate our emotions and

socially undesirable responses This book also presents innovative combinations of multiple methodologies including behavioral experiments computer modeling functional Magnetic Resonance Imaging fMRI experiments Event Related Potential ERP experiments and brain lesion studies It is divided into four sections The first three sections present the latest research on respectively understanding and representing other people representing social groups and the interplay of cognition and emotion in social regulation In the fourth section contributors step back and consider a range of novel topics that have emerged in the context of social neuroscience research understanding social exclusion as pain deconstructing our moral intuitions understanding cooperative exchanges with other agents and the effect of aging on brain function and its implications for well being Taken together these chapters provide a rich introduction to an exciting rapidly developing and expanding field that promises a richer and deeper understanding of the social mind
