frame DSLR boasting a 46MP backside illuminated CMOS sensor But in a fairly radical departure for the series it is also one  
of the company s fastest shooting DSLRs This combination of properties should significantly widen the camera s appeal to  
high end enthusiasts as well as a broad range of professional photographers The use of a backside illuminated BSI sensor  
means that the light collecting elements of the sensor are closer to the surface of the chip This should not only increase the  
efficiency of the sensor improving low light performance but should also be expected to make the pixels near the edges of the  
sensor better able to accept light approaching with high angles of incidence improving peripheral image quality Taking the
