If constructed the Keystone XL pipeline would transport crude oil e g synthetic crude oil or diluted bitumen derived from oil sands in Alberta Canada to destinations in the United States Because the pipeline crosses an international border it requires a Presidential Permit that is issued by the Department of State DOS The permit decision rests on a national interest determination a term not defined in the authorizing Executive Orders DOS states that it has significant discretion in the factors it examines in this determination Key events related to the Presidential Permit include September 19 2008 TransCanada submitted an application for a Presidential Permit for its Keystone XL pipeline November 10 2011 DOS announced it needed additional information concerning alternative pipeline routes through the Nebraska Sandhills January 18 2012 In response to a legislative mandate in P L 112 78 DOS with the President s consent announced its denial of the Keystone XL permit May 4 2012 TransCanada submitted a revised permit application to DOS Although some groups have opposed previous oil pipeline permits opposition to the Keystone XL proposal has generated substantially more interest among environmental stakeholders Pipeline opponents are not a monolithic group some raise concerns about potential local impacts such as oil spills or extraction impacts in Canada some argue the pipeline would have national energy and climate change policy implications A number of key studies indicate that oil sands crude has a higher greenhouse gas GHG emissions intensity than many other forms of crude oil The primary reason for the higher intensity oil sands are heavy oils with a high viscosity requiring more energy and resource intensive activities to extract However analytical results vary due to different modeling assumptions Moreover industry stakeholders point out that many analyses indicate that GHG emissions from oil sands crude oil are comparable to other heavy crudes some of which are produced and or consumed in the United States Because of oil sands increased emissions intensity further oil sands development runs counter to some stakeholders energy and climate change policy objectives These objectives may vary based on differing views concerning the severity of climate change risk and or the need for significant mitigation efforts Opponents worry that oil sands crude oil will account for a greater percentage of U S oil consumption over time making GHG emissions reduction more difficult On the other hand neither issuance of a Presidential Permit nor increased oil sands development would preclude the implementation of energy climate policies that would support less carbon intensive fuels or energy efficiency improvements A primary local regional environmental concern of any oil pipeline is the risk of a spill Environmental groups have argued that both the pipeline s operating parameters and the material being transported imposes an increased risk of spill Industry stakeholders have been critical of these assertions To examine the concerns Congress included provisions in P L 112 90 requiring a review of current oil pipeline regulations and a risk analysis of oil sands crude Opponents of the

Keystone XL pipeline and oil sands development often highlight the environmental impacts that pertain to the region in which the oil sands resources are extracted. Potential impacts include among others land disturbance and water resource issues. In general, these local regional impacts from Canadian oil sands development may not directly affect public health or the environment in the United States. Within the context of a Presidential Permit, the mechanism to consider local Canadian impacts is unclear.

The Making of Environmental Law Richard J. Lazarus, 2023-02-15. An updated and passionate second edition of a foundational book. How did environmental law first emerge in the United States? Why has it evolved in the ways that it has? And what are the unique challenges inherent to environmental lawmaking in general and in the United States in particular? Since its first edition, *The Making of Environmental Law* has been foundational to our understanding of these questions. For the second edition, Richard J. Lazarus returns to his landmark book and takes stock of developments over the last two decades. Drawing on many years of experience on the frontlines of legal and policy battles, Lazarus provides a theoretical overview of the challenges that environmental protection poses for lawmaking related to both the distinctive features of US lawmaking institutions and the spatial and temporal dimensions of ecological change. The book explains why environmental law emerged in the manner and form that it did in the 1970s and traces how it developed over subsequent decades through key laws and controversies. New chapters composing more than half of the second edition examine a host of recent developments. These include how Congress dropped out of environmental lawmaking in the early twenty-first century, the shifting role of the judiciary, long overdue efforts to provide environmental justice to disadvantaged communities, and the destabilization of environmental law that has resulted from the election of Presidents with dramatically clashing environmental policies. As the nation's partisan divide has grown deeper and the challenge of climate change has dramatically raised the perceived stakes for opposing interests, environmental law is facing its greatest challenges yet. This book is essential reading for understanding where we have been and what challenges and opportunities lie ahead.

Natural Resource Conflicts M. Troy Burnett, 2016-09-19 Natural resource and environmental conflicts have long been issues confronting human societies This case based examination of a wide range of natural resource disputes exposes readers to many contemporary examples that offer reasons for both hope and concern The Rwandan genocide the Sudanese civil war and perpetual instability in the Middle East and Africa each of these crises have arguably been instigated and maintained by natural resource disputes China has undertaken a Herculean task to plant hundreds of millions of trees along its margins in an effort to save Beijing from crippling dust storms and halt the expansion of the Gobi desert Will it work and is it worth it These and many other cases of conflict stemming from natural resource or environmental concerns are explained and debated in this up to date examination of contemporary and ongoing topics The book examines conflicts over precious resources and minerals such as diamonds oil water and fisheries as well as the pursuit of lesser known minerals like Coltan and other rare earth elements important resources in our technological age in remote locations such as Greenland and the Congo Each topic contains an overview and two position essays from different authors thereby providing the reader with highly informative and balanced perspectives Reference entries accompany each topic as well helping students to better understand each issue As the world hurtles into the 21st century these natural resource issues are becoming increasingly important with all global citizens having a significant stake in how these conflicts arise and play out

The Americas and Oceania: Assessing Sustainability Ray C. Anderson, Sara G. Beavis, Michael L. Dougherty, Tirso Gonzales, Ricardo Braun, Muhammad Aurang Zeb Mughal, Mark Wilson, 2012-11-01 The Americas and Oceania Assessing Sustainability provides extensive coverage of sustainability practices in two regions linked culturally and historically by their relative isolation before the Columbian exchange by their colonization after it and by the challenges of pollution resource overuse and environmental degradation Regional experts and international scholars focus on

environmental history in areas such as the South Pacific islands now particularly threatened by rising ocean levels due to climate change and on countries whose governments and corporations can play a major role in promoting or discouraging sustainable choices Brazil an emergent power on the world stage the United States the world's third most populous nation and New Zealand seemingly on its way to becoming an enviable model of sustainable development Fuel under Fire Margaret J. Goldstein, 2015-08-01 Every day people on Earth use about 90 million barrels of petroleum oil and natural gas to fuel cars buses airplanes farm equipment and factories to heat their homes and to manufacture detergents paints plastics and countless other products To get that petroleum oil and gas companies search all over the planet from northernmost Canada to deep under the ocean Because it is such a valuable commodity petroleum has become known as black gold And because of global dependence on this natural resource scholars say we are living in the Age of Oil Alongside its benefits petroleum has serious drawbacks It is not a renewable resource and many of Earth's most easily accessed petroleum deposits have been used up Companies have begun to search for oil in more difficult to reach places using controversial methods Extracting processing and refining oil is often environmentally destructive Oil spills and other accidents can contaminate soil and water kill wildlife and make people sick On a larger scale burning fossil fuels such as petroleum releases large amounts of carbon dioxide into the air leading to climate change Even as governments activists and researchers explore a wide range of conservation measures and alternative fuel sources the world continues to run on petroleum And the struggle to balance the pros and cons of this coveted resource will play a decisive role in the planet's future **Sustainable Energy**

Transitions Dustin Mulvaney, 2020-12-03 This textbook introduces the key concepts that underpin sustainable energy transitions Starting with the basic biophysical principles current sources and environmental consequences of existing energy resource use the book takes readers through the key questions and topics needed to understand prescribe and advocate just and sustainable energy solutions The interdisciplinary nature of the book aims to build bridges across the social and natural sciences and humanities bringing together perspectives ideas and concepts from engineering economics and life cycle assessment to sociology political science anthropology policy studies the humanities arts and some interdisciplinary thinkers that defy categories This accessible approach fills the gap for a textbook that integrates sustainability science and engineering studies with strong empirical social science and it will be a useful tool to anyone interested in the socio ecological dimensions of energy system transitions The Encyclicon - Volume 4 Thomas L. Saaty, Madjid

Tavana, 2021-03-02 Volume 4 has a very large number of more recent case studies and takes a closer look to the building process of the Benefits Opportunities Costs and Risks models using AHP top level networks rating of the B O C R with the help of the strategic criteria and ANP bottom level networks The Encyclicon is an advanced dictionary of structures used to represent complex decisions The first dictionary of hierarchic decision making was the Hierarchon Since hierarchies are a special case of networks the examples given here can be regarded as more general and complete representation of decision

making In particular except for a group of market share examples they all involve decisions made by considering Benefits B Opportunities O Costs C and Risks R They also involve a synthesis of these BOCR merits into a single overall best outcome for a decision This is the first volume of the series of Encyclicon books Each of the books contains different models from different years collected by a different author along with Thomas L Saaty and although all books tackle similar topics there are different models and different approaches on how to summarize and represent models for general use These books are meant as a reference guide when you try to set up ANP or AHP complex decision models The case studies in the books are linked to online reference material related to that which often include the super decision model power point presentation and the original report of the case
