Multirate Statistical Signal Processing Omid S. Jahromi, 2007-05-15 The field of multirate signal processing has witnessed a great deal of progress and an increasingly wide range of applications since the publication of the first textbook by Crochiere and Rabiner 1983. However, this progress has been mainly in the area of deterministic systems with emphasis on perfect reconstruction and orthogonal systems. This book introduces a statistical theory for extracting information from signals that have different sampling rates. This new theory generalizes the conventional deterministic theory of multirate systems beyond many of its constraints. Furthermore, it allows for the formulation of several new problems such as spectrum estimation, time delay estimation, and sensor fusion in the realm of multirate signal processing. I have arrived at the theory presented here by integrating concepts from diverse areas such as information theory, inverse problems, and theory of equalities. The process of merging a variety of concepts of different origin results in both merits and shortcomings. The former include the fresh and differentiated view of an amateur providing scope of application. The latter include a lack of in-depth experience in each of the original fields. Granted, this may lead to gaps in continuity; however, it goes without saying that a complete theory can seldom be achieved by one person and in a short time. My goal in writing this book has been to inspire the reader to initiate his own research and add to the theory of multirate statistical signal processing. **Theory of**

Fredric J. Harris, 2022-09-01 Multirate signal processing can improve system performance and reduce costs in applications ranging from laboratory instruments, cable modems, wireless systems, satellites, Radar, Sonar, and consumer entertainment products. This second edition continues to offer a systematic, clear, and intuitive introduction to multirate signal processing for working engineers and system designers. Significant new material and fresh concepts, including Green Signal Processing techniques, have been introduced. The author uses extensive examples and figures to illustrate a wide range of multirate techniques, from basic resampling to leading-edge cascade and multi-stage filter structures. Along the way, he draws on extensive research and consulting experience to introduce processing tricks shown to maximize performance and efficiency. Coverage includes: Effect of sampling and resampling in time and frequency domains; Relationships between FIR filter specifications and filter length of taps; Window design and equal ripple Remez design techniques; Square Root Nyquist and Half-band Filters, including new enhancements; Polyphase FIR filters; up-sampling, down-sampling; Polyphase M-path analysis and synthesis; channelizers and cascade pairs; Polyphase interpolators for arbitrary sample rate changes; Dyadic half-band filters; quadrature mirror filters; Channel banks for multiple arbitrary bandwidths and center frequencies; Comprehensive coverage of recursive all-pass filters and channelizers; non-uniform and uniform phase; mixed recursive and non-recursive; Comparisons with traditional DSP designs; Extensive applications coverage throughout. Swagata Nandi,Debasis Kundu,2020-08-21 This book introduces readers to various signal processing models that have been used in analyzing periodic data and discusses the statistical and computational methods involved Signal processing can broadly be considered to be the recovery of information from physical observations The received signals are usually disturbed by thermal electrical atmospheric or intentional interferences and due to their random nature statistical techniques play an important role in their analysis Statistics is also used in the formulation of appropriate models to describe the behavior of systems the development of appropriate techniques for estimation of model parameters and the assessment of the model performances Analyzing different real world data sets to illustrate how different models can be used in practice and highlighting open problems for future research the book is a valuable resource for senior undergraduate and graduate students specializing in mathematics or statistics

Fundamentals of Statistical Signal Processing Steven M. Kay,2013 For those involved in the design and implementation of signal processing algorithms this book strikes a balance between highly theoretical expositions and the more practical treatments covering only those approaches necessary for obtaining an optimal estimator and analyzing its performance Author Steven M Kay discusses classical estimation followed by Bayesian estimation and illustrates the theory with numerous pedagogical and real world examples Cover volume 1 *Discrete random signals and statistical signal processing* ,2004 *Introduction To Statistical Signal Processing With Applications,1/e* Mandyam Dhati Srinath,1979 *Theory of Multirate Statistical Signal Processing and Applications* ,2005 This dissertation develops basic theory and applications of statistical multirate signal processing Specific tools and terminology for describing multirate systems in the time and frequency domains are presented An optimal multirate estimator is derived in both a direct form and recursive form The Recursive form of the optimal estimator allows calculation of the relative change in performance when input signals are added or removed from the multirate system The optimal multirate filtering problem also is specialized to the case of optimal multirate linear prediction An efficient method for calculating the multirate linear prediction coefficients and error variances is developed through the use of the multichannel Levinson recursion and generalized triangular UL factorization Finally a multirate sequential classifier is derived and applied to the problem of target classification It is shown that classifier parameters needed for implementing the multirate sequential classifier are the same as those for multirate linear prediction The methods presented in this dissertation are useful for multisensor fusion particularly when the sensors are operating at different rates
