country to facilitate financial B2C e commerce Residents of countries with higher levels for the subject of examination will probably already have gained adequate skills as indicated by a medium strong negative relation to computer courses taken in the last three months and other online activities such as online information search and online banking positively correlated While online banking is partially included in the variable e_comm representing financial B2C e commerce through customer s usage of online financial services this particular result may not be totally conclusive However it seems logical that consumers with good computer and internet skills also spending a lot of time with advanced activities on the internet may also engage in financial B2C e commerce This assumption narrows down the target group and excludes a certain clientele from online product offers of financial institutions banks will need to adapt their web portals accordingly set up initiatives improving computer and web skills of their consumers and meet their consumers on the internet e g with advertising while they are using search engines Practical evidence supporting these interpretations can be found in several examples of [IMF Publications Catalog, Spring 2017](#) International Monetary Fund.
