Secondary Analysis of the TIMSS Data David F. Robitaille,Albert E. Beaton,2005-12-19 Researchers who participate in IEA studies have a unique opportunity to work collaboratively with their counterparts from many different countries and disciplinary backgrounds over a period of several years on questions of shared academic interest Once the data for a given study have been collected and the first round of international reports published however opportunities for that kind of collaboration tend to be much less frequent A major strength of IEA studies compared to other large scale international studies is that they are classroom based thereby making it possible for researchers and policy makers to investigate linkages between students achievement and a wide range of variables Those variables could be related to instructional practices to students and teachers background and attitudes to school organizational patterns or to opportunity to learn to name a few The research questions that TIMSS was designed to address make it clear that these kinds of relational multi variate analyses were among the major goals of the project The international

reports of the TIMSS 95 results that were published by the International Study Center at Boston College between 1996 and 1999 were intended to provide comprehensive coverage of the basic findings of the study. They were not intended to provide in-depth analyses of research and policy issues; instead, their main purpose was to make the basic findings of the study widely available in a timely manner. This they certainly did.
