Single-phase grounding line selection method for closed-loop distribution network adapted to medium voltage microgrid access Qinghui Lu,Xiang-Gen Yin,Jian Qiao,Zhichang Liu,Lingjin Zhu,Xin Yin,2023-09-16 Aim The access of the medium voltage MV microgrid changes the radial structure of traditional distribution networks causing the distribution network to operate in a closed loop manner The closed loop operation complicates the fault characteristics of the distribution network and the traditional single phase grounding SPG line selection method is no longer applicable Therefore it is necessary to propose a new targeted SPG line selection method Methods This paper analyzes the network structure of MV microgrids and MV distribution networks and establishes a multi level closed loop operation distribution network model with MV microgrid access Then the SPG fault characteristics of the closed loop operation distribution system under the small current grounding mode are analyzed from the perspective of two level bus nodes Furthermore based on the analysis of fault characteristics a closed loop operation distribution network line selection method suitable for microgrid access is proposed and a detailed design is carried out in terms of equipment configuration and communication schemes forming a relatively complete automatic line selection system At the same time the proposed line selection scheme is based on the two level bus nodes which can be analogously applied to the multi level closed loop operation distribution network Results The simulation results show that the proposed line selection scheme can be effectively applied to the closed loop operation distribution network with MV microgrid access Conclusion The traditional SPG line selection method will have misjudgment problems

after the MV microgrid is integrated into the distribution network but the line selection method proposed in this paper has good adaptability 2024 the 8th International Conference on Energy and Environmental Science (ICEES 2024) Yanan Liu,2024-08-23 This book dedicates to publish exceptionally important and high quality agenda setting research so as to tackle the key global and societal challenges of ensuring the provision of energy and protecting our environment for the future The book appeals to chemical scientists chemical and process engineers energy researchers bio scientists and environmental scientists from across academia industry and government The scope is intentionally broad and the book recognizes the complexity of issues and challenges relating to energy conversion and storage alternative fuel technologies and environmental science The main topics of this book include but not limit to 1 alternative energy and the environment 2 assessments of the condition of ecosystems and environmental quality 3 behavior of and impacts of pollutants in atmosphere soil and water 4 management of ecosystems environment and water resources 5 modeling and regional environmental assessments includes global change 6 treatment restoration of ecosystems environment and water resources 7 sustainable renewable energy and 8 energy and built environment All scales of studies and analysis from impactful fundamental advances to interdisciplinary research across the bio chemical bio geo physical sciences and chemical engineering disciplines are welcomed So this book is linked to the energy environment nexus and is of significant general interest to our community spanning readership **Electricity Distribution Network Design** Erkki Lakervi,E. J. Holmes,1995 As well as dealing with the planning and design of modern distribution systems as opposed to more general aspects of transmission and generation this second edition of Electricity Distribution Network Design 1989 updates its treatment of computer based planning and reliability It also covers the implications of international standards network information systems and distribution automation

Control and Automation of Electrical Power Distribution Systems James Northcote-Green,Robert G. Wilson,2017-12-19 Implementing the automation of electric distribution networks from simple remote control to the application of software based decision tools requires many considerations such as assessing costs selecting the control infrastructure type and automation level deciding on the ambition level and justifying the solution through a business case Control and Automation of Electric Power Distribution Systems addresses all of these issues to aid you in resolving automation problems and improving the management of your distribution network Bringing together automation concepts as they apply to utility distribution systems this volume presents the theoretical and practical details of a control and automation solution for the entire distribution system of substations and feeders The fundamentals of this solution include depth of control boundaries of control responsibility stages of automation automation intensity levels and automated device preparedness To meet specific performance goals the authors discuss distribution planning performance calculations and protection to facilitate the selection of the primary device associated secondary control and fault indicators The book also provides two case studies that illustrate the business case for distribution automation DA and methods for calculating benefits including the assessment of

crew time savings As utilities strive for better economies DA along with other tools described in this volume help to achieve improved management of the distribution network Using Control and Automation of Electric Power Distribution Systems you can embark on the automation solution best suited for your needs **Research and Development in Expert Systems VII**
