Tasks

Scheduling Tasks: Tasks in Project can be manually or auto-scheduled.

- **Manually Scheduled Tasks** (the default): Can be placed anywhere in the activity and Project won't move them. You can add just the details you know and come back later to fill in additional details.
- **Auto Scheduled Tasks:** Are scheduled by Project. You enter information such as the task duration, work, resources, and constraints, and Project calculates when the task should start.

Set the Task Scheduling Mode: Click the New Task button in the status bar and select a scheduling method.

Insert a Task: In Gantt Chart view, click where you want to add the new task and click the Task button on the Task tab. Type a name for the task and press Enter.

Delete a Task: Click the Task ID for the task you want to delete and press the Delete key on the keyboard.

Create a Milestone Task: Click in a blank Task Name cell, type a name for the milestone and press Enter. Click the milestone's Duration cell, type 0 D, and press Enter. Milestones are just regular tasks, but with no duration. They are represented with the symbol.

Resources

There are 3 types of resources in Project:

- Work Resource** Resources that you assign by time. For a person who works full time, their cost is based on time worked.
- Material Resource** Physical items used in completing the project. For a computer, their cost is not based on time.
- Cost Resource** Resources that aren't based on time or quantity, such as travel expenses or fees.

View the Resource Sheet: Click the View tab on the ribbon and click the Resource Sheet button.

Add Work Resources: Click in the first blank Resource Name cell, type a resource name, and press Enter. Ensure Work is selected in the Type column and add in any known resource information.

Add Material Resources: Click in the first available cell in the Resource Name list, type a resource name, and press Enter. Click the Type list's list arrow and select Material. Add any known resource information.

Add Cost Resources: Click in the first

Manage Projects

Save a Baseline: Click the Project tab on the ribbon, click the Set Baseline button, and select Set Baseline. Select Entire project or Selected tasks and click OK.

Update Actual Task Values: Select the task you want to update, click the Mark on Task button on the Task tab and select Update Task. Fill in any actual task values and click OK.

Update Task Completion: Select the task, then click the completion percentage updated. Click a Completion Percentage button in the Schedule group of the Task tab on the ribbon.

View Project Statistics: Click the Project tab, click the Project Information button, and click Statistics.

View Project Variance: In Task Sheet view, click the View tab, click the Variance button, and select the item you want to see variance for (e.g. cost or duration). The Variance column displays the difference between the baseline value and actual values entered for the project.

Reports

Create a Report: Project reports provide a graphical snapshot of project information. There are 4 main report types, which you'll find

Realizing Complex Integrated Systems Anthony P. Ambler,John W. Sheppard,2025-02-20 The creation of complex integrated systems is in itself complex It requires immense planning and a large team of people with diverse backgrounds based in dispersed geographical locations and countries supposedly working to a coordinated schedule and cost The systems engineering task is not new but recent scales most definitely are The world is now capable of designing and manufacturing systems whose complexity was not considered possible 10 years ago While many are trained to think in terms of a complete system where everything is designed and produced by a single project team today such systems involve integrating subsystems and components which are also complex that have been developed by other project teams Inevitably this introduces additional complexities involving elements out of the direct control of the project but which are essential to its overall success In addition to traditional systems engineering topics of hardware and software design testability and manufacturability there are wider issues to be contemplated project planning communication language an issue for international teams units of measure imperial vs metric used across members of the team supply chains pandemics military action and natural disasters legal issues based on place of production and sale the ethics associated with target use and the threat of cyberattack This book is the first attempt to bring many of these issues together to highlight the complexities that need to be considered in modern system design It is neither exhaustive nor comprehensive but it gives pointers to the topics for the reader to follow up on in more detail
