*Support for the conceptual design stage of effective and resource-efficient offerings* Sergio Brambila,2020-10-20 Human activities in the form of production and consumption have increased to an all time high In many cases this increase has resulted in environmental problems such as waste and pollution that in turn affect our health and way of living Societies have proposed different measures to address such environmental problems These range from different waste treatment technologies to alternative business models policy measures and lifecycle thinking in the design of products to mention but a few In this research the focus is on supporting early design activities of what is often called the conceptual design stage with the objective to provide effective and resource efficient offerings The early design activities considered here are planning analysis and evaluation Design researchers have largely supported these three activities with a variety of methods and tools However previous research has shown that design support coming from academia has had a low uptake in industry In this regard the aim of this research is to propose not only useful but also usable support for design practitioners during the conceptual design stage This research is carried out in the

manufacturing sector in Sweden where selected companies expressed an interest in collaborating with academia to address more thoroughly effective and resource efficient offerings To better match company needs and research from academia this research took a pragmatic and cross disciplinary approach This research approach along with literature reviews semi structured interviews workshops and questionnaires shows different ways in which support can be made more useful and usable The main gap addressed here is that the knowledge and the related skills of the user of the support have not been sufficiently explored The results include requirements of the user of the support proposed methods and tools derived from the requirements identified and most importantly the knowledge and skills needed by the user of the support The main message of this research is that support could be expanded from methods and tools to include knowledge and skills needed by design practitioners the users of support The flow of support from academia to industry could also be reinforced in a two way flow through a pragmatic and cross disciplinary approach to first and foremost address design practitioners needs

Månskliga aktiviteter i form av produktion och konsumtion har aldrig varit högre Denna kunskap har tidigare varit tillgänglig till miljöproblem som avfall och föroreningar vilka i sin tur påverkar vår hälsa och levnadssätt För att möta dessa miljöproblem har olika tekniska lösningar som tekniker för avfallshantering alternativa affärsmodeller policy och livscykeldesign för att minska miljöpåverkan Fokuset i forskningen som presenteras i denna avhandling är på tidigare designaktiviteter vilka ofta kallas det konceptuella designstadiet och som syftar till att ta fram resurseffektiva erbjudanden Detta steg behandlas här genom att undersöka designaktiviteterna planering analys och utvärdering Designforskare har till stor del ställt dessa tre aktiviteter med en mängd olika metoder och verktyg Emellertid visar tidigare forskning att designstadiet från akademin har ett lågt upptag i industrin Syftet med denna forskning är därför att föreslå ett användbart steg som också är användarvänligt för utövare under det konceptuella designstadiet För att uppnå detta genomförs forskningen inom tillverkningssektorn i Sverige där deltagande förtag uttryckt ett intresse av att samarbeta med akademin avseende resurseffektiva erbjudanden För att bättre matcha företagets behov med forskning från akademin antas en pragmatisk och tvärvetenskaplig strategi Denna strategi tillsammans med litteratur försäkrar semistrukturerade intervjuer workshops och enkäter visar hur stegen i det konceptuella designstadiet kan bli mer användbara och användarvänliga Den huvudsakliga forskningsluckan som tas upp här är att kunskap och relaterade förmågor hos användaren av stegen inte har undersökts tillräckligt Resultatet ger en beskrivning av kraven på de stegen som användaren behöver förslag på metoder och verktyg som baseras på de identifierade kraven och viktigast av allt den kunskap och de förmågor som användaren av stegen behöver ha Huvudbudskapet är att stegen kan utvidgas från att omfatta metoder och verktyg till att även inkludera behovet av kunskap och förmågor hos designutövare det vill säga användarna av supporten Stegen från den akademiska världen till industrin kan också förstärkas genom att bli ett tvärvetenskapligt som med en pragmatisk och tvärvetenskaplig strategi först och främst adresserar användarens behov

**Early stages of designing resource-efficient offerings** Sergio Brambila-Macias, 2018-01-17 The increasing use of natural resources and the pollution it causes calls for new ways of

addressing customer needs Additionally a more uncertain and complex world also presents new challenges In this thesis these new challenges are tackled through inter and transdisciplinary research which require more interaction across disciplines to tackle complex phenomena The manner in which companies address customer needs starts from the designing a multiple stakeholder perspective of offerings where companies rely on different types of support guidelines standards methods and tools In this thesis these offerings include products services systems and solutions This plays an important role in the use of natural resources and its impact on the environment In this Licentiate I present results to show initial cues on how to design resource efficient offerings and more specifically their analysis and evaluation in the early stages of the design process This type of offerings is suggested to be crucial for the circular economy which can be understood as a paradigm shift towards sustainability In this paradigm shift designing is carried out by taking into account reuse remanufacture and recycling of products as strategies by multiple stakeholders and companies Other strategies include providing services a function or a solution through dematerialization and transmaterialization The methods used in this research are narrative and systematic literature reviews thematic analysis and a case study The results show a lack of interdisciplinary research in the academic literature in subjects relevant to the design of resource efficient offerings The results also show a need to clarify what transdisciplinary research entails Moreover current practice shows that support used by companies needs to consider several factors for it to be useful for example the vision of the company participation of potential users of the support and everyday operations among other characteristics Finally more practical support coming from academia is necessary to improve its use in industry
