Proceedings of the 6th International Conference on Industrial Engineering (ICIE 2020) Andrey A. Radionov, Vadim R. Gasiyarov, 2021-03-31 This book highlights recent findings in industrial manufacturing and mechanical engineering and provides an overview of the state of the art in these fields mainly in Russia and Eastern Europe A broad range of topics and issues in modern engineering are discussed including the dynamics of machines and working processes friction wear and lubrication in machines surface transport and technological machines manufacturing engineering of industrial facilities materials engineering metallurgy control systems and their industrial applications industrial mechatronics automation and robotics The book gathers selected papers presented at the 6th International Conference on Industrial Engineering ICIE held in Sochi Russia in May 2020 The authors are experts in various fields of engineering and all papers have been carefully reviewed Given its scope the book will be of interest to a wide readership including mechanical and production engineers lecturers in engineering disciplines and engineering graduates *The Kinematic Geometry of Gearing* David B. Dooner, Ali Seireg, 1995 Describing a dynamic new approach to the design manufacture and evaluation of gears The Kinematic Geometry of Gearing is an indispensable tool of the trade for gear and power transmission engineers and tribologists It presents an entirely new and comprehensive methodology for the design and manufacture of virtually all types of toothed bodies for general function transmission The authors develop from first principles the kinematic relationships necessary to design and manufacture circular and non circular gears and other contact type motion force transmission mechanisms They also demonstrate with the help of the enclosed software how the user specifications can be implemented in an interactive PC environment such that gear pairs and cutter pairs can be designed concurrently The revolutionary approach outlined by Professors Dooner and Seireg is based on mathematical derivations from various theories of kinematic geometry especially the screw theory This approach arms engineers and tribologists with a powerful new tool for enhancing

the performance of conventional gears mounted on parallel or non parallel axes Furthermore it has been proven capable of greatly facilitating the design and manufacture of new devices revealing heretofore unexplained phenomena which currently hinder the advancement of the gearing art beyond application to constant speed transmission It also provides a means of developing and manufacturing tools and gear forms which were previously difficult to conceptualize or implement The Kinematic Geometry of Gearing is divided into three sections with the first being devoted to introducing the basic concepts and various types of toothed motion force transmission mechanisms Part II builds upon those concepts to develop a comprehensive methodology that can be applied to the design and manufacture of various types of gears and motion function generators Part III discusses the design procedure itself The authors supply a number of simplified design formulas and with the help of numerous examples they clearly illustrate the capabilities of this versatile new approach to the integrated interactive CAD CAM of gear pairs and their production process This groundbreaking book presents an entirely new and comprehensive methodology for the design manufacture and evaluation of gears and virtually all other types of toothed motion force transmission mechanisms In it the authors develop the kinematic relationships necessary to design and manufacture gear pairs and with the help of the enclosed software demonstrate how those relationships can utilize the design specification in an interactive PC environment to produce the design and manufacturing information and performance characteristics concurrently A powerful new tool for evaluating and enhancing the performance of gear pairs and dealing with previously unexplained phenomena An evolutionary leap in the design and manufacture of gear pairs provides a method for developing and manufacturing tools and gear forms which were previously difficult to conceptualize or implement Design formulas and numerous real world examples clearly illustrate the capabilities of this versatile new approach Enclosed disk demonstrates to designers how to implement the described method into a fully integrated CAD and CAM process
