Handbook of Systemic Approaches to Psychotherapy Manuals Mauro Mariotti, George Saba, Peter

Stratton, 2022-02-17 This handbook examines the development and use of manuals to guide and support systemic couples and family therapies. It addresses the process of manualizing, providing a secure base for therapist creativity rather than delineating prescriptive procedures. The volume addresses therapist and trainer concerns by demonstrating the value of sufficiently articulating clinical and teaching models to inform colleagues of what actually occurs during therapy. The book describes the history, value, and controversies of manuals. In addition, it explores issues and experiences in the creation of manuals, identifies research issues related to the use and evaluation of manuals, and addresses training as a context for the application of treatment manuals. Key areas of coverage include: Reports of experiences with major internationally established manuals; formulations of innovative practices by their developers and specifications of training programs; Discussion of the various formats of manuals demonstrating their benefit and transportability across different contexts; Surveys of a broad selection of manuals creating a flexible and diversified concept of what forms manuals may take; Essential guidance for using manuals, which is an indispensable step for the field to progress and to claim to health resource commissioning governments and insurance agencies that the systemic practice is evidence based and effective. The *Handbook of Systemic Approaches to Psychotherapy Manuals* is an essential resource for researchers, professors, and graduate students as well as clinicians and related therapists and professionals in clinical psychology, family studies, public health, social work, psychotherapy, child and adolescent psychology, and all interrelated disciplines.

Mobile Networks for Biometric Data Analysis Massimo Conti, Natividad Martínez Madrid, Ralf Seepold, Simone Orcioni, 2016-07-27 This book showcases new and innovative approaches to biometric data capture and analysis, focusing especially on those that are characterized by non-intrusiveness, reliable prediction algorithms, and high user acceptance. It comprises the peer-reviewed papers from the international workshop on the subject that was held in Ancona, Italy, in October 2014, and featured sessions on ICT for health care, biometric data in automotive and home applications, embedded systems for biometric data analysis, biometric data analysis, EMG and ECG, and ICT for gait analysis. The background to the book is the challenge posed by the prevention and treatment of common widespread chronic diseases in modern aging societies. Capture of biometric data is a cornerstone for any analysis and treatment strategy. The latest advances in sensor technology allow accurate data measurement in a non-intrusive way, and in many cases it is necessary to provide online monitoring and real-time data capturing to support a patient's prevention plans or to allow medical professionals to access the patient's current status. This book will be of value to all with an interest in this expanding field.
