Motivating Humans Martin E. Ford,1992-10-06

Motivating Humans represents an excellent integration of different motivational constructs The main purpose of Ford s book and his theory motivational systems theory MST is to provide an integrative and coherent model of motivation that synthesizes the various constructs from the different theories into one comprehensive framework It represents an important addition to the knowledge base on motivation and will be generative of much future research Moreover the book presents the framework in a scholarly yet readable fashion that makes the book accessible to professional psychologists as well as graduate and undergraduate students Paul R Pintrich in Contemporary Psychology Why do people do the things they do In Motivating Humans Ford answers this age old question and offers the reader a precise and comprehensive description of the basic substance of human motivation what it is how it works and how it impacts what people do and how well they do it He also

shows how classic and contemporary motivation theory in education management and psychology can be integrated into a coherent and unified framework called Motivational Systems Theory from which he derives 17 principles for motivating humans. Different from any other motivation book, *Motivating Humans* presents numerous unique features: a variety of concrete examples to bridge the gap between abstract theory and the world of practical human affairs; an applications chapter that explores such issues as ways to promote social responsibility in youth, ways to increase work productivity and job satisfaction, and ways to increase learning and school achievement; the most up-to-date coverage of recent studies in motivation and pedagogical devices; including summary tables to help the reader digest and remember key information. Unique, comprehensive, and accessibly written, *Motivating Humans* will inspire a wide readership including professors and students in psychology, management, education, developmental psychology, and clinical psychology. Class Tested: What the Students Say. The chart on the history of motivational theory, organized broadly by MST concepts, was extremely helpful in providing the reader with a look at the field in a glance. First and foremost, the fact that this is a legitimate psychological theory, and I can understand it, having had very little other exposure to psychology, is a very strong aspect of the book. It refers to and explains a variety of psychological theories and principles without losing me. Also, any theory that seems to unify a large volume of disparate work is always attractive to me, especially if it does a good enough job surveying its predecessors, as I think the book does. Finally, I think that the summary of the LSF in chapter two was integral to the largeness or wide view of the book. It helped to tie in and explain the whole person approach to motivational theory. I really liked how MST emphasized the role of emotions in motivation and human action, where other theories had rationalized them. Emotions are very powerful, and I believe it is virtually impossible to explain away something that I think psychology does too readily. Motivational Systems Theory is the most comprehensive and compelling theory of human motivation which I have seen to date. Martin Ford has taken an impoverished and muddled field of psychological inquiry and transformed it into a coherent and useful tool for explaining human behavior. Chapter 6 is especially brilliant. It gives an overview of all the major and most of the not-so-major theories and capitalizes on their similarities rather than their differences. Most practitioners in schools and business recognize the value of motivating people and do so operating from their gut. It is good to know that there is a workable and logical theory to put behind the practice and help refine it. Chapter 7 is particularly helpful. One could read this chapter and none others and still benefit. Finally, a book which will help educators turn their students on to learning. It should be required reading for all classroom teachers. Praise for this volume: *Motivating Humans* by Martin Ford presents one of the most complete and comprehensive theories of human motivation yet to be proposed. This is a significant work that is essential reading for all interested both in understanding motivation and in applying motivational principles in the workplace. Robert J. Sternberg, Yale University. *Motivating Humans* is a well thought out and well organized book that focuses on issues of motivation. Educators in particular will be interested in this volume. It utilizes a combination of logic and existing literature to

build its case Martin Ford's work is creative yet analytic *Motivating Humans* will certainly stimulate some serious class discussion Gerald R Adams College of Family and Consumer Studies University of Guelph Ontario Canada Using a broad systems perspective Ford has skillfully organized a wide and all too often confusing array of advances in motivation theory and research Students researchers and practitioners in education and psychology should find this book most helpful in providing a clear and thought provoking introduction to the field Ruth Kanfer Department of Psychology University of Minnesota *Motivating Humans* contains a wealth of information from theory to application to help educators increase school learning and achievement Twenty five pages of bibliography alone make this book attest to its thoroughness A chapter of theories of motivation can only be regarded as definitive some 31 theories of motivation are described and arranged in a table format Ford regards facilitation not control as the guiding idea for motivating people an idea that fits nicely with the growing role of teacher as facilitator Wisely he offers no ready formula for facilitating motivation for there are no magic motivational buttons that can be pushed to make people want to learn work hard and act in a responsible manner But Ford does offer a comprehensive glimpse into the mechanism of motivation for those who are trying to find their own paths toward inspiring it It deserves the highest praise and the widest reading for its treatment of such a complex subject in such an accessible and thorough manner *Motivating Humans* should serve long as the standard source and reference on motivation Educational Leadership *Motivational Theory: An Analysis of Key Concepts and Applications* Dr. Utpal

Chakraborty,2023-08-20 The book titled *Motivational Theory An Analysis of Key Concepts and Applications* offers a comprehensive exploration of motivation and its various theories It consists of eight chapters covering topics such as foundational concepts cognitive and behavioural theories contemporary perspectives and practical applications With a page range of 5 145 the book provides an in depth analysis of motivational theories in different contexts It adopts a structured approach starting from basics and progressing to advanced concepts facilitating effective comprehension The book incorporates theories like Maslow's Hierarchy of Needs Herzberg's Two Factor Theory and Expectancy Theory ensuring a well rounded understanding of motivational concepts It also addresses critiques and challenges in Chapter 7 and concludes with key findings and implications The reference section provides valuable citations for further exploration Overall the book serves as a valuable resource for students researchers and professionals seeking a comprehensive understanding of motivational theories and their practical applications **Studyguide for Motivation** Cram101 Textbook Reviews,2013-05 Never HIGHLIGHT a Book Again Includes all testable terms concepts persons places and events Cram101 Just the FACTS101 studyguides gives all of the outlines highlights and quizzes for your textbook with optional online comprehensive practice tests Only Cram101 is Textbook Specific Accompanies 9780872893795 This item is printed on demand **Interpersonal Regulation of Learning and Motivation** Simone Volet,Marja Vauras,2013-01-03 *Interpersonal Regulation of Learning and Motivation* is the first book in the field to focus on major methodological advances in research on interpersonal regulation of

learning and motivation Interest in developing ways of capturing the dynamics of interpersonal regulation in real life learning interactions is growing rapidly Understanding these dynamics is particularly timely given the increased use of collaborative learning activities in schools and university settings as well as through face to face and computer supported collaborative learning CSCL environments While groups and collections of individuals in social interaction are expected to bring their own motivations and goals to the learning situations it is also assumed that these are further shaped through interaction as the group activity evolves Research methodology publications in the field of learning regulation and motivation are still dominated by a focus on the individual The study of collaborative learning at both conceptual and methodological level has not incorporated the significance of social regulatory processes of learning and motivation This is a new development in the field and one covered by this book The book contains numerous illustrations of innovative Methodological approaches to study and interpret the dynamics of interpersonal regulation Data sources and data representations to capture scaffolded instruction Theory based analytic methods to investigate interactions in real life collaborative learning Coding systems and social software tools for gathering and analysing interactive data Interpersonal Regulation of Learning and Motivation brings together the work of scholars who have been studying interpersonal regulation of learning and motivation at the boundaries of the individual and the social and who have made original methodological contributions to the study of interactive learning environments In combination their work provides a range of distinctive and original conceptual and methodological contributions to this under examined and vital field of research making this an essential read for any researcher or student interested in collaborative learning and motivation

Contemporary Language Motivation Theory Ali H. Al-Hoorie, Peter D. MacIntyre, 2019-11-18 This book brings together contributions from the leaders of the language learning motivation field The varied chapters demonstrate how

Gardner's work remains integral to a diverse range of contemporary theoretical issues underlying the psychology of language even today 60 years after the publication of Gardner and Lambert's seminal 1959 paper. The chapters cover a wide selection of topics related to applied linguistics, second language acquisition, social psychology, sociology, methodology, and historical issues. The book advances thinking on cutting edge topics in these diverse areas, providing a wealth of information for both students and established scholars that show the continuing and future importance of Gardner and Lambert's ideas.

Research Anthology on Securing Mobile Technologies and Applications Management Association, Information Resources, 2021-02-05. Mobile technologies have become a staple in society for their accessibility and diverse range of applications that are continually growing and advancing. Users are increasingly using these devices for activities beyond simple communication, including gaming and e-commerce, and to access confidential information, including banking accounts and medical records. While mobile devices are being so widely used and accepted in daily life and subsequently housing more and more personal data, it is evident that the security of these devices is paramount. As mobile applications now create easy access to personal information, they can incorporate location tracking services, and data collection can happen discreetly behind the scenes. Hence, there needs to be more security and privacy measures enacted to ensure that mobile technologies can be used safely. Advancements in trust and privacy, defensive strategies, and steps for securing the device are important foci, as mobile technologies are highly popular and rapidly developing. The *Research Anthology on Securing Mobile Technologies and Applications* discusses the strategies, methods, and technologies being employed for security amongst mobile devices and applications. This comprehensive book explores the security support that needs to be required on mobile devices to avoid application damage, hacking, security breaches, and attacks, or unauthorized accesses to personal data. The chapters cover the latest technologies that are being used, such as cryptography, verification systems, security policies, and contracts, and general network security procedures, along with a look into cybercrime and forensics. This book is essential for software engineers, app developers, computer scientists, security and IT professionals, practitioners, stakeholders, researchers, academicians, and students interested in how mobile technologies and applications are implementing security protocols and tactics amongst devices.

Self-Determination Theory Richard Ryan, Edward L. Deci, 2017-01-20. Self-determination theory (SDT) provides a framework for understanding the factors that promote motivation and healthy psychological and behavioral functioning. In this authoritative work, the codevelopers of the theory comprehensively examine SDT's conceptual underpinnings, including its six mini-theories, empirical evidence base, and practical applications across the lifespan. The volume synthesizes a vast body of research on how supporting or thwarting people's basic needs for competence, relatedness, and autonomy affects their development and well-being. Chapters cover implications for practice and policy in education, health care, psychotherapy, sport, and the workplace.
