Motorcycle Engine Performance Curves:

Engine Design Concepts for World Championship Grand Prix Motorcycles Alberto Boretti, 2012-08-06 The World Championship Grand Prix WCGP is the premier championship event of motorcycle road racing The WCGP was established in 1949 by the sport's governing body the Fédération Internationale de Motocyclisme FIM and is the oldest world championship event in the motorsports arena This book developed especially for racing enthusiasts by motorsports engineering expert Dr Alberto Boretti provides a broad view of WCGP motorcycle racing and vehicles but is primarily focused on the design of four stroke engines for the MotoGP class The book opens with general background on MotoGP governing bodies and a history of the event's classes since the competition began in 1949 It then presents some of the key engines that have been developed and used for the competition through the years Technologies that are used in today's MotoGP engines are discussed A sidebar discussion on calculating brake indicated and friction performance parameters provides mathematical information for readers who like such technical details Future developments of MotoGP engines including the use of biofuels and recovery of thermal and braking energy are presented The introduction concludes with a chart that details the winners of the various classes of WCGP motorcycle racing since the competition began in 1949 The bulk of the book consists of four previously published SAE technical papers that were expressly chosen by Dr Boretti to provide greater insight to the relationships between engine parameters and performance namely the influence on friction and mean effective pressure of traditional spark ignited four stroke engines tuned for a narrow high power output The first paper provides the reader with a quick way to estimate the friction loss and engine output The second paper discusses output and fuel consumption of multi valve motorcycle engines The third paper published in 2002 compares WCGP engines developed to comply with the then new FIM regulations that allowed four stroke engines in the competition The fourth paper examines specific power densities and therefore the level of sophistication and costs of MotoGP 800 cm³ engines This paper shows the performance of these as well as the 1000cc SuperBike engines The fifth paper presents four engine concepts including one for a MotoGP Superbike with 2 and 3 cylinders The sixth paper compares 3 and 4 in line V4 V5 and V6 layouts through 1 D engine simulations The seventh paper considers the actual operation of 800cc MotoGP engines on the race track where the percentage of the duration in fully open throttle is less than 20% of the race but the partial throttle is used for as much as 80% of the race The final paper in the compendium reports on the Honda oval piston engine concept

Design of Racing and High-Performance Engines 2004-2013 Douglas Fehan,2013-02-12 This compendium is an update to two best selling editions published by SAE International in 1995 and 2003 Editor Doug Fehan has assembled a collection of technical papers from the SAE archive that will inspire readers to use race engine development as an important tool in the future of transportation He focuses on several topics that are important to future race engine design electrification materials and processes and improved technology Today s electric hybrid vehicles and kinetic energy recovery systems embody what inventors envisioned in the early 1900s First employed in trams and trains of that era the technology was almost forgotten until racers resurrected their version in 2009 F 1 racing The automotive industry has long admired the aircraft industry s use of lightweight metals advanced finishing processes and composites The use of these materials and processes has helped reduce overall mass and in turn improved speed performance and reliability of race engines Their initial high cost was a limiting factor for integrating them into mass produced vehicles With racing leading the way those limitations were overcome and vehicles today feature some amazing adaptations of those processes and materials Engine power efficiency durability reliability and more recently emissions have always been of primary importance to the automotive world The expanding use of electrification biofuels CNG high pressure fuel delivery systems combustion air management turbocharging supercharging and low viscosity lubricants have been the focus of race engine development and are now turning up in dealer showrooms The papers in this publication were selected for two reasons they demonstrate the leadership that racing plays in the future of automotive engineering and design as it relates to engines and they will be interesting to everyone who may be in racing and to those who may want to be in racing
