### Manual Tongs

According to a recent data from the IADC ,Manual Tongs are directly responsible for over 10% of all Lost time Accidents.The most common of these injuries are mashed hands and fingers followed by being struck by the Tongs, Small particles of Tong Die shrapnel embedded in the face or eyes because eye protection was not worn and rarely,but still present, deaths or serious injuries resulting from Tong or Tong Head failure.So lets begin here with the basics of how to get you home safe each day. To start, all Floorhands need to be responsible for inspecting Tongs each day.(Usually if time is permitting it's a good idea to check them out as soon as you get there.)To begin inspection,**Start by putting on eye protection and gloves** (If you have not done so already).Open the Jaws and wire brush or steam off the Dies & inspect them for wear.Look for cracked ,chipped or uneven wear.Examine Dies for sharpness.Remember,many accidents are caused because Tong Dies slip on the Tool Joint when make-up torque is applied. Are the Die Retainers in place? (Usually small nuts and bolts) If not, they need to be in place.Chances are you just found a few that need to be replaced,So lets change them out.With a helper to steady the Tongs and Eye & Hand protection in place, Remove the retainers, place The Die Driver in the slot of the Die to be removed and drive it downwards with a small hammer.(**This Die Driver prevents you from having to strike a tool while holding it with your hand, and should always be used**)Clean the slot you just removed the Die from, It doesn't hurt to apply a small amount of Pipe Dope to its surface,then place a new Tong Die in the slot and gently tap it into place.Don't forget to reinstall all of the retainers. Now you have not only improved the safety of every floorhand, but you have saved yourself the extra work of having to push slipping Tongs back over & over again!
