Flexible Automation in Japan J. Hartley, 2013-04-09 Much has been said and written about Japan's manufacturing prowess. Most of the comment comes from people who are merely visitors to the country and can be best classified as observers looking in from the outside. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines *The Industrial Robot*, *Assembly Automation*, *Sensor Review* and *The FMS Magazine*. Most of the material in this book is from John Hartley's pen and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry. **Regional Industrial Buying Guide**, 2005 *Chilton's Iron Age*, 1982 *Thomas Register of American Manufacturers and Thomas Register Catalog File*, 2002 Vols for 1970-71 includes manufacturers catalogs.

Manufacturing Technology Transfer Yasuo Yamane, Tom Childs, 2018-10-08 Based on a bestselling book originally published in Japanese *Manufacturing Technology Transfer: A Japanese Monozukuri View of Needs and Strategies*, offers time-tested methods and little-known tips for achieving successful transfer of technology along with the skills required to operate that technology. Designed to support a series of lectures on technology transfer within a master's course on the management of technology, it presents the results of years of research carried out at Hiroshima University. The book delves into the authors' decades of experience transferring technology between Japan and the rest of the world, particularly to developing countries from where much of the world's future economic growth is expected. It contains case studies of successful technology transfers from both the ship building and food equipment industries. Its wide-reaching coverage examines methods of skill transfer, production management and manufacturing company classification. Introducing readers to the engineering activities that occur within the manufacturing industry, the book illustrates the engineering technology activities involved in manufacturing along with the production management activities required to support them. It also explains how job simulators can help shorten learning times in the manufacturing industry in the same way that flight simulators are used to teach flying skills to pilots. The book outlines a framework for teaching and learning processes that can be visualized in terms of an S-shaped learning curve. It explains how technology transfer overseas should be supported by contractual agreements between the parties concerned. Detailing the legal contractual responsibilities for all parties involved, it also describes what you should do if problems arise during the transfer. Integrating previously unpublished research results with illustrative case studies, this book is suitable for a wide audience within the manufacturing industry, including manufacturing engineering students in both
