**Capital Theory and Political Economy** Lefteris Tsoulfidis, 2021-05-31 In recent years there have been a number of new developments in what came to be known as the Capital Theory Debates The debates took place mainly during the 1960s as a

result of Piero Sraffa's critique of the neoclassical theory according to which the prices of factors of production directly depend on their relative scarcities Sraffa showed that when income distribution changes there are many complexities developed within the economic system impacting on prices in ways which are not possible to predict These debates were revisited in the 1980s and again more recently along with a parallel literature that has developed among neoclassical economists and has also looked at the impact of shocks on an economy This book summarizes the debates and issues around the theory of capital and brings to the fore the more recent developments It also pinpoints the similarities and differences between the various approaches and critically evaluates them in light of available empirical evidence The focus of the book is on the price trajectories induced by changes in income distribution and the resulting shape of the wage rates of profit curves and frontier These issues are central to areas such as microeconomics international trade growth technological change and macro stability analysis Each chapter starts with the theoretical issues involved followed by their formalization and subsequently with their operationalization More specifically the variables of the classical theory of value and distribution are rigorously defined and quantified using actual input output data from a number of major economies but mainly from the USA over long stretches of time The empirical results are not only consistent with the anticipations of the theory but also further inform and therefore strengthen its predictive content raising new significant questions

**Understanding Development Economics** Adam Fforde, 2014-01-03 Important parts of development practice especially in key institutions such as the World Bank are dominated by economists In contrast Development Studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles Hence a tension has arisen between the claims made by Development Economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by Development Studies The aim of this book is to show how the two disciplines have interacted as well as how they differ This is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries This book introduces Development Economics to those coming from two different but linked perspectives economists and students of development who are not economists In both explaining and critiquing Development Economics the book is able to suggest the implications of these findings for Development Studies and more broadly for development policy and its outcomes
