## **Motor Cognition Motor Cognition:**

Motor Cognition Marc Jeannerod, 2006-06-29 Our ability to acknowledge and recognize our own identity our self is a characteristic doubtless unique to humans Where does this feeling come from How does the combination of neurophysiological processes coupled with our interaction with the outside world construct this coherent identity We know that our social interactions contribute via the eyes ears etc However our self is not only influenced by our senses It is also influenced by the actions we perform and those we see others perform Our brain anticipates the effects of our own actions and simulates the actions of others In this way we become able to understand ourselves and to understand the actions and emotions of others This book describes the new field of Motor Cognition Though motor actions have long been studied by neuroscientists and physiologists it is only recently that scientists have considered the role of actions in building the self How consciousness of action is part of self consciousness how one's own actions determine the sense of being an agent how actions performed by others impact on ourselves for understanding others differentiating ourselves from them and learning from them these questions are raised and discussed throughout the book drawing on experimental clinical and theoretical bases The advent of new neuroscience techniques such as neuroimaging and direct electrical brain stimulation together with a renewal of behavioral methods in cognitive psychology provide new insights into this area Mental imagery of action self recognition consciousness of actions imitation can be objectively studied using these new tools The results of these investigations shed light on clinical disorders in neurology psychiatry and in neuro development

1 kapitel eller op til 5% af teksten      **Cognition and Motor Processes** W. Prinz,A. F. Sanders,2012-12-06 The issue of the relationship between cognition and motor processes can be and has been raised at different levels of analysis At the neurophysiological level it refers to the interactions between afferent and efferent information At the neurological and neuropsychological level it relates to the mutual dependencies between the sensory and the motor part of the brain or more precisely between sensory and motor functions of various parts of the brain In psychology the issue under debate concerns at a molecular level the relationship between perception and movement or at a more molar level the relations between cognition and action For the title of this book we deliberately decided to combine two terms that are taken from two of these levels in order to emphasize both the multilevel structure of the issues involved and the multidisciplinary nature of the following contributions Although the term cognition has been tremendously misused in recent years at least in psychology it is still the only term available to serve as a convenient collective name for all sorts of cognitive processes and functions

**Biomarkers for Huntington's Disease** Elizabeth A. Thomas,Georgia M. Parkin,2023-10-12 Huntington s disease HD is a fatal inherited neurodegenerative disorder characterized by chorea motor instabilities psychiatric manifestations and cognitive decline Early genetic testing provides an opportunity for clinical interventions aimed at delaying onset and or slowing progression of disease however current treatments for HD are limited with only two FDA approved drugs available to manage chorea Encouragingly however several disease modifying treatment approaches are in the therapeutic pipeline with

more than 200 clinical studies and many more preclinical studies in the works Robust and reliable biomarkers are needed to predict disease onset monitor disease progression and assess treatment responses More specifically biomarkers to stratify patients for clinical trials and biomarkers to track drug efficacy will certainly lead to improved clinical trial design and success This book represents the first book focused solely on biomarkers for HD and represents a distinct resource that will be informative not only for clinicians and those involved in clinical trial design but also for a wide range of neurodegenerative disease researchers This edited volume is written by top leaders in the field and takes a cross disciplinary approach to cover a broad spectrum of biomarker types in order to provide the latest advances in the development of biochemical molecular imaging and digital biomarkers that have been investigated for HD With the ultimate goal of treating patients the development of disease associated biomarkers has never been more important Falls in Older People Stephen R.

Antonino Pennisi,Alessandra Falzone,2019-09-25 This edited volume focuses on the hypothesis that performativity is not a property confined to certain specific human skills or to certain specific acts of language nor an accidental enrichment due to creative intelligence Instead the executive and motor component of cognitive behavior should be considered an intrinsic part of the physiological functioning of the mind and as endowed with self generative power Performativity in this theoretical context can be defined as a constituent component of cognitive processes The material action allowing us to interact with reality is both the means by which the subject knows the surrounding world and one through which he experiments with the possibilities of his body This proposal is rooted in models now widely accepted in the philosophy of mind and language in fact it focuses on a space of awareness that is not in the individual or outside it but is determined by the species specific ways in which the body acts on the world This theoretical hypothesis will be pursued through the latest interdisciplinary methodology typical of cognitive science that coincide with the five sections in which the book is organized Embodied enactivist philosophical approaches Aesthetics approaches Naturalistic and evolutionary approaches Neuroscientific approaches Linguistics approaches This book is intended for linguists philosophers psychologists cognitive scientists scholars of art and

aesthetics performing artists researchers in embodied cognition especially enactivists and students of the extended mind

**Connected Minds** Nicolas Payette, 2012-04-25 The theme for this volume is social cognition construed from a psychological and collective point of view From the psychological point of view the question is to understand how the human mind processes social information how it encodes stores and uses it in the social context From a collective point of view the question is to understand how individual cognition is influenced improved increased or impaired by social interactions for instance in communicating and collaborating with intelligent agents These two dimensions of social cognition are obviously interdependent the psychological dimension makes the collective dimension possible which can in return modify the psychological dimension The book is divided into four parts The first part is about socio cognitive skills Among those we count face recognition imitation learning embodied social interaction cheater detection and psychological concept acquisition The second part is about persons and memories stereotypes attraction judgements and impression formation are the subjects at hand The third part is about understanding each other A key part of that understanding is the motor system whether or not we see it as a mirror but community membership itself can also contribute to our understanding of others The fourth and final part is about social cognition in societies This section is unified by the common goal of understand how social cognition actually influences the structure of different societies whether whole cultures specific social networks rural communities or even groups of caterpillars

**Ways of Knowing** Mark Harris, 2007 Questions about how humans come to know themselves and their worlds have always been at the heart of anthropology and are necessarily part of a broader intellectual history This book brings together anthropologists to discuss how they come to know what they know about the societies they study

Current Research and Emerging Directions in Emotion-Cognition Interactions Florin Dolcos, Lihong

Wang, Mara Mather, 2015-03-02 Emotion can impact various aspects of our cognition and behavior by enhancing or impairing them e.g. enhanced attention to and memory for emotional events or increased distraction produced by goal irrelevant emotional information. On the other hand, emotion processing is also susceptible to cognitive influences typically exerted in the form of cognitive control of emotion or emotion regulation. Despite important recent progress in understanding emotion cognition interactions, a number of aspects remain unclear. The present book comprises a collection of manuscripts discussing emerging evidence regarding the mechanisms underlying emotion cognition interactions in healthy functioning and alterations associated with clinical conditions in which such interactions are dysfunctional. Initiated with a more restricted focus targeting 1) identification and in-depth analysis of the circumstances in which emotion enhances or impairs cognition and 2) identification of the role of individual differences in these effects, our book has emerged into a comprehensive collection of outstanding contributions investigating emotion cognition interactions based on approaches spanning from behavioral and lesion to pharmacological and brain imaging and including empirical, theoretical and review papers alike. Co-hosted by the Frontiers in Neuroscience Integrative Neuroscience and Frontiers in Psychology Emotion Science, the contributions comprising our book and the associated research topic are grouped around the following seven main themes distributed across the two hosting journals: I Emotion and Selectivity in Attention and Memory II The Impact of Emotional Distraction Linking Enhancing and Impairing Effects of Emotion III What Really is the Role of the Amygdala IV Age Differences in Emotion Processing The Role of Emotional Valence V Affective Face Processing Social Cognition and Personality Neuroscience VI Stress Mood Emotion and the Prefrontal Cortex The Role of Control in the Stress Response VII Emotion Cognition Interactions in Clinical Conditions. As illustrated by the present collection of contributions, emotion cognition interactions can be identified at different levels of processing from perception and attention to long-term memory, decision-making processes and social cognition and behavior. Notably, these effects are subject to individual differences that may affect the way we perceive, experience and remember emotional experiences or cope with emotionally challenging situations. Moreover, these opposing effects tend to co-occur in affective disorders such as depression and PTSD, where uncontrolled recollection of and rumination on distressing memories also lead to impaired cognition due to emotional distraction. Understanding the nature and neural mechanisms of these effects is critical as their exacerbation and co-occurrence in clinical conditions lead to devastating effects and debilitation. Hence, bringing together such diverse contributions has allowed not only an integrative understanding of the current extant evidence but also identification of emerging directions and concrete venues for future investigations.
