North American Recent Soft-Shelled Turtles (Family Trionychidae) Robert G. Webb, 2019-11-29 In *North American Recent Soft Shelled Turtles Family Trionychidae* Robert G Webb meticulously examines the biology ecology and taxonomy of North America's unique soft shelled turtles. This comprehensive volume blends scientific rigor with clear prose showcasing Webb's adeptness at translating complex data into accessible language. The book stands as both a scholarly resource and a field guide enriched with extensive illustrations, maps, and a thorough review of the latest research. Webb situates these turtles within the broader context of herpetological studies, addressing their conservation status and ecological significance amid ongoing environmental changes. Robert G Webb, a prominent herpetologist with decades of fieldwork experience, brings to this text a deep-seated passion for turtle conservation and an extensive background in ecological research. His hands-on experience in various ecosystems across North America has profoundly informed his understanding of these creatures. Webb's previous works have laid the groundwork for this pivotal volume, reflecting his commitment to advancing knowledge about aquatic reptiles and their habitats. This book is indispensable for biologists, conservationists, and enthusiasts alike. Whether for academic research or personal interest, Webb's insightful analysis sheds light on the importance of soft-shelled turtles within their ecosystems, making it a crucial addition to any natural history collection. Alien Reptiles and Amphibians Fred Kraus,2008-12-19 Transportation of species to areas outside their native ranges has been a feature of human culture for millennia During this time such activities have largely been viewed as beneficial or inconsequential However it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution habitat loss and climate change Indeed the irreversible nature of most alien species int ductions makes them less prone to correction than many other ecological problems Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique mag tude of the changes being made These alien interlopers often cause considerable ecological and economic d age where introduced Species extinctions food web disruptions community alte tions ecosystem conversion changes in nutrient cycling fisheries collapse watershed degradation agricultural loss building damage and disease epidemics are among the destructive and frequently unpredictable

ecological and economic effects that invasive alien species can inflict The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance
