Particular Reference to Fatigue Analysis Echezonachukwu Chukwuemeka Chukwuka,2011 Fatigue Behaviour of Offshore Structures Ashok Gupta,Ramesh P. Singh,2012-12-06 and Literature Review Chapter 1 1 INTRODUCTION AND LITERATURE REVIEW The exploration for oil and gas in ever increasing water depths has given an impetus to research efforts on the behaviour of offshore structures under ocean environment These structures are continuously subjected to environmental loading because of waves wind and current A response analysis is required to assess the safety of offshore structure under severe storm conditions as well as for estimation of damage caused by less severe but more frequently occurring sea states A majority of the reported failures in the life time of offshore structures are in fact fatigue failures The offshore structures are usually built in the form of welded tubular structures The joints of these tubular members experience the fatigue damage mainly due to small defects in welding which act as crack initiators high stress concentrations and the variable loads The variable loads due to the ocean waves cause cyclic stress variation in the structural members and the accumulated effect of these stresses results in the fatigue failure *Fatigue and Fracture Mechanics of Offshore Structures* Linus Etube,2001 Etube mechanical engineering University College London presents novel research and the results of wave induced stress on the operational life of offshore structures Using the results of an investigation undertaken to assess the fatigue and fracture performance of steels used in the industry the five chapters discuss details of the methodology to develop a typical jack up offshore standard load history JOSH factors that influence fatigue resistance of structural steels used in the construction of jack up structures methods used to model the relevant factors for inclusion in JOSH with emphasis on loading and structural response interaction results and details of experimental variable amplitude corrosion fatigue tests conducted using JOSH and a novel generalized methodology for fast assessment of offshore structural welded joints Distributed by ASME c Book News Inc **Fatigue Analysis of Offshore Structures** M. Almar-Naess, 1985 Soon after oil and gas exploration and production began in the North Sea in the 1960s it became apparent that the steel structure design developed for offshore activities in the Gulf of Mexico was not adequate when transferred to the rigorous North Sea environment Realizing the great need for a better understanding of the fatigue phenomenon concerned materials scientists at SINTEF and Det norske Veritas prepared a five year programme for intensified research on fatigue of offshore steel structures It became the National Five Year Programme for Fatigue of Offshore Steel Structures in 1981 This text comprises a study of fatigue in offshore steel structures It seeks to make results in the area available in a form that can be utilized and understood by those responsible for the different stages in engineering design fabrication and service of offshore structures *Fatigue analysis - offshore structures* C. A. Bainbridge, 1986 **Fatigue and Fracture Mechanics of Offshore Structures** Linus S.
