Houweling,J. Peter van Tintelen,2016-11-30 Clinical management and signs are the focus of this practical cardiogenetic reference for those who are involved in the care for cardiac patients with a genetic disease With detailed discussion of the basic science of cardiogenetics in order to assist in the

clinical understanding of the topic. The genetic causes of various cardiovascular diseases are explained in a concise clinical way that reinforces the current management doctrine in a practical manner. The authors will cover the principles of molecular genetics in general but also specific to cardiac diseases. They will discuss the etiology, pathogenesis, pathophysiology, clinical presentation, clinical diagnosis, molecular diagnosis and treatment of each cardiogenetic disease separately. Therapy advice, ICD indications, indications for and manner of further family investigation will all be covered while each chapter will also contain take home messages to reinforce the key points. The chapters reviewing the different diseases will each contain a table describing the genes involved in each. Each chapter will also contain specific illustrations cumulatively giving a complete practical review of each cardiogenetic disease separately. Special emphasis will be given to advice on how to diagnose and manage cardiogenetic diseases in clinical practice which genes should be investigated and why and the pros and cons of genetic testing. Guidelines for investigation in families with sudden cardiac death at young age will also be included. This book will be written for the general cardiologist and the clinical geneticist who is involved in cardiac patients and will provide answers to questions such as Which genes are involved and which mutations? What is the effect of the mutation at cellular level? Which genes should be tested and why? What is the value of a molecular diagnosis? Does it influence therapy? When should the first degree relatives be tested and in which way?

*Lost in Translation* Rakesh K. Srivastava, 2014. This book is all about the definition and finding ways to prioritize and accelerate translation research in biomedical sciences and rapidly turning new knowledge into first in human studies. It represents an effort to bring together scientists active in various areas of translational research to share science and hopefully generate new ideas and potential collaborations. The book provides a comprehensive overview of translational work that includes significant discoveries and pioneering contributions e.g. in immunology, gene therapy, stem cells and population sciences. It may be used as an advanced textbook by graduate students and even ambitious undergraduates in biomedical sciences. It is also suitable for non-experts i.e. medical doctors who wish to have an overview of some of the fundamental models in translational research. Managing the translational enterprise remains a work in progress. The world is changing rapidly and the scientific world needs to seek new ways to ensure that discoveries get translated for patients efficiently and as quickly as possible. In addition, everyone expects the investment in biomedical research should pay dividends through effective therapeutic solutions. This unique project provides a broad collaborative approach of the international scientific team to present its view and opinion how to cross barriers to incentives for translational research in medical sciences. Contributing to the book is an international team of prominent co-authors. The book consists of unique and widely treated topics and includes new hypotheses, data and analyses.
