Newton A Very Short Introduction:

Newton Rob Iliffe, 2007-01-25 This Very Short Introduction uses Newton's own unpublished writings to provide fascinating insight into the man who kept the Royal Society under his thumb, was Head of the Mint and whose contributions to our understanding of the heavens and the earth are considered by many to be unparalleled. The author begins with the legends surrounding Newton, before next exploring the forces that shaped his life, introducing along the way many of the key thinkers and politicians of the time. Although Newton's science was largely revered, his reputation reached near immortal status with the publication of the *Principia*; theologically, his beliefs were very controversial. He was a fanatical Protestant and claimed that tribes like the Goths, Vandals, and Huns had tried to save the planet from the corruption of the Catholics. He was also convinced that he was specially chosen by God to protect the original pure form of Christianity and viewed any criticisms directed at him as a form of persecution. Resisting the urge to show how Newton's views on alchemy, mathematics, physics, and religion complemented one another, the author instead emphasises that these were the very different obsessions of an extremely complex man whose beliefs at the time dominated England's political, religious, and intellectual landscape. ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Voltaire: A Very Short Introduction Nicholas Cronk, 2017-02-10 Voltaire 1694-1778, best remembered as the author of *Candide*, is one of the central actors, arguably the defining personality, of the European Enlightenment. In this Very Short Introduction, Nicholas Cronk explores Voltaire's remarkable career and demonstrates how his thinking is pivotal to our notion and understanding of the Enlightenment. In a fresh and modern examination of his writings, Cronk examines the nature of Voltaire's literary celebrity, demonstrating the extent to which his work was reactive and practical and therefore made sense within the broader context of the debates to which he responded. The most famous living author in Europe in the 18th century, Cronk emphasises Voltaire's skills of performance as a writer and his continued relevance today. He concludes by looking not only at Voltaire's impact in literature and philosophy but also his influence on French political values and modern French politics. Matter: A Very Short Introduction Geoff Cottrell, 2019-03-28 What is matter? Matter is the stuff from which we and all the things in the world are made. Everything around us, from desks to books to our own bodies, are made of atoms, which are small enough that a million of them can fit across the breadth of a human hair. Inside every atom is a tiny nucleus, and orbiting the nucleus is a cloud of electrons. The nucleus is made out of protons and neutrons, and by zooming in further

you would find that inside each there are even smaller particles quarks Together with electrons the quarks are the smallest particles that have been seen and are the indivisible fundamental particles of nature that have existed since the Big Bang almost 14 billion years ago The 92 different chemical elements that all normal matter is made from were forged billions of years ago in the Big Bang inside stars and in violent stellar explosions This Very Short Introduction takes us on a journey from the human scale of matter in the familiar everyday forms of solids liquids and gases to plasmas exotic forms of quantum matter and antimatter On the largest scales matter is sculpted by gravity into planets stars galaxies and vast clusters of galaxies All the matter that that we normally encounter however constitutes only 5% of the matter that exists The remaining 95% comes in two mysterious forms dark matter and dark energy Dark matter is necessary to stop the galaxies from flying apart and dark energy is needed to explain the observed acceleration of the expansion of the universe Geoff Cottrell explores the latest research into matter and shows that there is still a lot we don't know about the stuff our universe is made of ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Geology: A Very Short Introduction Jan Zalasiewicz, 2018-06-28 Ranging across the 4.6 billion year history of the planet geology is the subject that encompasses almost all that we see around us in one way or another and also much that we cannot see beneath our feet and on other planets The fruits of geology provide most of the materials that give us shelter and most of the energy that drives our modern lives Within the study of geology lie some of the clues to the extraordinary impact our species is going to play out on the planet in centuries and millennia to come In this Very Short Introduction Jan Zalasiewicz gives a brief introduction to the fascinating field of geology Describing how the science developed from its early beginnings he looks at some of the key discoveries that have transformed it before delving into its various subfields such as sedimentology tectonics and stratigraphy Analysing the geological foundations of the Earth Zalasiewicz explains the interlocking studies of tectonics geophysics and igneous and metamorphic petrology and geochemistry and describes how rocks are dated by radiometric dating Considering the role and importance of geology in the finding and exploitation of resources including fracking he also discusses its place in environmental issues such as foundations for urban structures and sites for landfill and in tackling issues associated with climate change Zalasiewicz concludes by discussing the exciting future and frontiers of the field such as the exploration of the geology of Mars ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **The Metaphysical World of Isaac Newton** John Chambers, 2018-02-13 Newton's heretical yet incisive writings on theology spirituality alchemy and prophecy

written in secret alongside his Principia Mathematica Shows how Newton s brilliance extended far beyond math and science into alchemy spirituality prophecy and the search for lost continents such as Atlantis Explains how he was seeking to rediscover the one true religion that existed prior to the Flood of Noah when science and spirituality were one Examines Newton s alternate timeline of prehistory and his study of prophecy through the Book of Revelations including his prediction of Apocalypse in the year 2060 Isaac Newton 1643 1727 is still regarded by the world as the greatest scientist who ever lived He invented calculus discovered the binomial theorem explained the rainbow built the first reflecting telescope and explained the force of gravity In his famous masterpiece Principia Mathematica he described the mechanics of the physical universe with unimagined precision proving the cosmos was put together according to laws The perfection of these laws implied a perfect legislator To Newton they were proof that God existed At the same time Newton was writing Principia Mathematica he was writing a twin volume that he might have called had it been completed Principia Theologia Principles of Theology This other masterpiece of Newton kept secret because of the heresies it contained consists of thousands of essays providing equation incisive answers to the spiritual questions that have plagued mankind through the ages Examining Newton s secret writings John Chambers shows how his brilliance extended into alchemy spirituality the search for lost continents such as Atlantis and a quest to uncover the corrupted texts that were rife in the Bibles of his time Although he was a devout Christian Newton s work on the Bible was focused not on restoring the original Jewish and Christian texts but on rediscovering the one true religion that existed prior to the Flood of Noah when science and spirituality were one The author shows that a single thread runs through Newton s metaphysical explorations He is attempting to chart the descent of man s soul from perfection to the present day The author also examines Newton s alternate timeline of ancient history and his study of prophecy through the Book of Revelations including his prediction of an Apocalypse in the year 2060 followed by a radically transformed world He shows that Newton s great hope was that these writings would provide a moral compass for humanity as it embarked upon the great enterprise that became our technological world

Nothing Frank Close,2009-06-25 What is nothing What remains when you take all the matter away Can empty space a void exist This Very Short Introduction explores the science and the history of the elusive void from Aristotle who insisted that the vacuum was impossible via the theories of Newton and Einstein to our very latest discoveries and why they can tell us extraordinary things about the cosmos Frank Close tells the story of how scientists have explored the elusive void and the rich discoveries that they have made there He takes the reader on a lively and accessible history through ancient ideas and cultural superstitions to the frontiers of current research He describes how scientists discovered that the vacuum is filled with fields how Newton Mach and Einstein grappled with the nature of space and time and how the mysterious aether that was long ago supposed to permeate the void may now be making a comeback with the latest research into the Higgs field We now know that the vacuum is far from being empty it seethes with virtual particles and antiparticles that erupt spontaneously into being and it also may contain hidden dimensions

that we were previously unaware of These new discoveries may provide answers to some of cosmology s most fundamental questions what lies outside the universe and if there was once nothing then how did the universe begin ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

The Scientific Revolution: A Very Short Introduction Lawrence Principe,2011-04-28 Lawrence M Principe takes a fresh approach to the story of the scientific revolution emphasising the historical context of the society and its world view at the time From astronomy to alchemy and medicine to geology he tells this fascinating story from the perspective of the historical characters involved

How Great Thinkers Transformed Our Ideas C C Hagan,2024-05-08 Dare to think This was the catch cry of the Enlightenment over 300 years ago when the breakaway from religion towards a more secular society began Isaac Newton led the Scientific Revolution which transformed society for the next 300 years with progress not then dreamed of Stephen Hawking revealed a new cosmology and linked Einstein s relativity to small scale quantum mechanics Yet what was the mind set of Newton s age compared to Hawking s age What were the changes in the mind sets of society and philosophy during those 300 years and were they all linked to science This book represents a slice of the history of ideas science and philosophy mixed with their personal lives against how science mathematics and philosophy evolved over those 300 years Revealed are the truly astonishing stories and ideas of five of the greatest thinkers who ever lived who provided us rich insights into the cosmos Their stories class them as true founders of scientific revolutions battlers with feats of endurance and triumphs to rise to great heights Through the personal tragedies of Curie and Hawking to the intellectual battles fought by Einstein Newton and Leibniz these five scientists inspire us and enrich our ideas

Engineering: A Very Short Introduction David Blockley,2012-03-22 Engineering is part of almost everything we do from the water we drink and the food we eat to the buildings we live in and the roads and railways we travel on This book explores the nature and practice of engineering its history its scope and its relationship with art science and technology

Describing the Hand of God Robert Brennan, 2016-04-28 The question of divine agency in the world remains one important unresolved underlying obstacle in the dialogue between theology and science Modern notions of divine agency are shown to have developed out of the interaction of three factors in early modernity Two are well known late medieval perfect being theology and the early modern application of the notion of the two books of God's revelation to the understanding of the natural order It is argued the third is the early modern appropriation of the Augustinian doctrine of inspiration This assumes the soul's existence and a particular description of divine agency in humans which became more generally applied to divine agency in nature Whereas Newton explicitly draws the parallel between divine agency in humans and that in nature Darwin rejects its supposed perfection and Huxley raises serious questions regarding the traditional understanding of the soul This book offers an alternative incarnational description of divine agency freeing consideration of divine agency from being dependent on resolving the complex issues of perfect being theology and the existence of the soul In conversation with Barth's pneumatology this proposal is shown to remain theologically coherent and plausible while resolving or avoiding a range of known difficulties in the science theology dialogue *Enlightenment Thought* Margaret L. King, 2019-02-19

Margaret L King has put together a highly representative selection of readings from most of the more significant but by no means the most obvious texts by the authors who made up the movement we have come to call the Enlightenment They range across much of Europe and the Americas and from the early seventeenth century until the end of the eighteenth In the originality of the choice of texts in its range and depth this collection offers both wide coverage and striking insights into the intellectual transformation which has done more than any other to shape the world in which we live today It is simply the best introduction to the subject now available Anthony Pagden UCLA and author of *The Enlightenment and Why It Still Matters* *Ghostwalk* Rebecca Stott, 2007-05-08 A Cambridge historian Elizabeth Vogelsang is found drowned clutching a glass prism in her hand The book she was writing about Isaac Newton's involvement with alchemy the culmination of her lifelong obsession with the seventeenth century remains unfinished When her son Cameron asks his former lover Lydia Brooke to ghostwrite the missing final chapters of his mother's book Lydia agrees and moves into Elizabeth's house a studio in an orchard where the light moves restlessly across the walls Soon Lydia discovers that the shadow of violence that has fallen across present day Cambridge which escalates to a series of murders may have its origins in the troubling evidence that Elizabeth's research has unearthed As Lydia becomes ensnared in a dangerous conspiracy that reawakens ghosts of the past the seventeenth century slowly seeps into the twenty first with the city of Cambridge the bridge between them Filled

with evocative descriptions of Cambridge past and present Ghostwalk centers around a real historical mystery that Rebecca Stott has uncovered involving Newton's alchemy In it time and relationships are entangled the present with the seventeenth century and figures from the past with the love torn twenty first century woman who is trying to discover their secrets A stunningly original display of scholarship and imagination and a gripping story of desire and obsession Ghostwalk is a rare debut that will change the way most of us think about scientific innovation the force of history and time itself *Women, the Novel, and Natural Philosophy, 1660-1727* K. Gevirtz, 2014-03-06 This book shows how early women novelists from Aphra Behn to Mary Davys drew on debates about the self generated by the scientific revolution to establish the novel as a genre Fascinated by the problematic idea of a unified self underpinning modes of thinking female novelists innovated narrative structures to interrogate this idea **Imagining the Creator God** Georges De Schrijver, 2016-09-30 Ever since it was demonstrated in the 1920s that the universe with its trillions of galaxies is caught up in a process of steady expansion it became evident that it must have originated from an initial singularity a Big Bang which gave rise to the formation of subatomic parts atoms molecules clouds of gas and finally stars and galaxies Running this expansion back in time scientists began to reckon with the miracle of an evolving universe of which we are the outcome the iron in our blood has been formed in the stars This book gives an overview of the cosmologies that were in vogue in antiquity the Jewish and Christian concepts of Creation and the classical thinkers in Greek cosmology Plato Aristotle and Ptolemy and in modern times Copernicus Galileo Kepler and Newton The book brings us right down to the present day with a careful and readable treatment of the scientific innovations inaugurated by Einstein and the specialists in quantum physics and to recent developments in astrophysics This path of exploration opens the avenue for imagining a Creator God who is so generous that he invites creation to share in his own creativity *The Human Cosmos* Jo Marchant, 2020-09-01 A Best Book of 2020 NPR A Best Book of 2020 The Economist A Top Ten Best Science Book of 2020 Smithsonian A Best Science Technology Book of 2020 Library Journal A Must Read Book to Escape the Chaos of 2020 Newsweek Starred review Booklist Starred review Publishers Weekly An historically unprecedented disconnect between humanity and the heavens has opened Jo Marchant's book can begin to heal it For at least 20 000 years we have led not just an earthly existence but a cosmic one Celestial cycles drove every aspect of our daily lives Our innate relationship with the stars shaped who we are our art religious beliefs social status scientific advances and even our biology But over the last few centuries we have separated ourselves from the universe that surrounds us It's a disconnect with a dire cost Our relationship to the stars and planets has moved from one of awe wonder and superstition to one where technology is king the cosmos is now explored through data on our screens not by the naked eye observing the natural world Indeed in most countries modern light pollution obscures much of the night sky from view Jo Marchant's spellbinding parade of the ways different cultures celebrated the majesty and mysteries of the night sky is a journey to the most awe inspiring view you can ever see looking up on a clear dark night That experience and the thoughts it

has engendered have radically shaped human civilization across millennia The cosmos is the source of our greatest creativity in art in science in life To show us how Jo Marchant takes us to the Hall of the Bulls in the caves at Lascaux in France and to the summer solstice at a 5 000 year old tomb at New Grange in Ireland We discover Chumash cosmology and visit medieval monks grappling with the nature of time and Tahitian sailors navigating by the stars We discover how light reveals the chemical composition of the sun and we are with Einstein as he works out that space and time are one and the same A four billion year old meteor inspires a search for extraterrestrial life The cosmically liberating summary revelation is that star gazing made us human
