Early Engineering Learning Lyn English, Tamara Moore, 2018-05-29 This book addresses engineering learning in early childhood spanning ages 3 to 8 years It explores why engineering experiences

are important in young children's overall development and how engineering is a core component of early STEM learning including how engineering education links and supports children's existing experiences in science, mathematics, and design and technology both before school and in the early school years. Promoting STEM education across the school years is a key goal of many nations with the realization that building STEM skills required by societies takes time and needs to begin as early as possible. Despite calls from national and international organisations, the inclusion of engineering-based learning within elementary and primary school programs remains limited in many countries. Engineering experiences for young children in the pre-school or early school years has received almost no attention even though young children can be considered natural engineers. This book addresses this void by exposing what we know about engineering for young learners including their capabilities for solving engineering-based problems and the few existing programs that are capitalising on their potential.

Investigating Ramps & Pathways with Young Children (Ages 3-8) Beth Dykstra Van Meeteren, 2022-12-23

Children are intrigued by moving objects even more so when they can engineer the movement. This volume in the STEM for Our Youngest Learners Series uses Ramps and Pathways as a context to provide children ages 3-8 with opportunities to engage in STEM every day. Ramps and Pathways is a meaningful and fun way for children to develop engineering habits of mind as they explore concepts in force and motion, properties of objects, and how an object's properties affect its movement. In the process, children develop spatial thinking that is essential for future careers in STEM. The text also offers guidance for arranging the physical, intellectual, social, emotional, and promotional environments of a classroom to embrace the natural integration of literacy learning. Each volume in this series includes guidance for forming partnerships with families and administrators that support STEM learning, vignettes showing educators and children engaging in inquiry, learning tips for selecting materials, modifications, and accommodations for diverse learners, ways to establish adult learning communities that support professional development, and more.

Book Features: Alignment with both the Head Start Early Learning Outcomes Framework (ELOF) and the NGSS Science and Engineering Practices with specific descriptions of how those science and engineering practices in Ramps and Pathways look and feel in Pre-K-2 classrooms. Examples of how to integrate literacy learning in a meaningful way. Descriptions of how the open-ended nature of ramps and pathways aligns with the Universal Design for Learning Framework (UDL). Developing Assessments for the Next Generation Science Standards National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science Education,Board on Testing and Assessment,Committee on Developing Assessments of Science Proficiency in K-12,2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education The new Framework and the NGSS are designed to guide educators in significantly altering the way K 12 science is taught The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time It structures science education around three dimensions the practices through which scientists and engineers do their work the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as students progress through grades K 12 Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework This report reviews recent and current work in science assessment to determine which aspects of the Framework s vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework s vision should consist of assessments designed to support classroom instruction assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level
