Automobile Automation Victoria A. Banks,Neville A. Stanton,2017-08-04 Increasing levels of driving automation has changed the role of the driver from active operator to passive monitor However Systems Design has been plagued by criticism for failing to acknowledge the new role of the driver within the system network To understand the driver s new role

within an automated driving system the theory of Distributed Cognition is adopted This approach provides a useful framework for the investigation of allocation of function between multiple agents in the driving system A Systems Design Framework has been developed that outlines how the Distributed Cognition paradigm can be applied to driving using both qualitative and quantitative research methodologies

Events provides researchers and practitioners with the tools they need to quickly and effectively measure traffic safety. As traditional crash based safety analyses are being undermined by today's growing use of intelligent vehicular and road safety technologies, crash surrogates or near misses can be more effectively used to measure the future risk of crashes. This book advances the idea of using these near crash techniques to deliver quicker and more adequate measurements of safety. It explores the relationships between traffic conflicts and crashes using an extrapolation of observed events rather than post crash data which is significantly slower to obtain. Readers will find sound estimation methods based on rigorous scientific principles offering compelling new tools to better equip researchers to understand road safety and its factors.

Coughlin, Lisa A. D'Ambrosio, 2012-01-20. Recommended CHOICE Current Reviews for Academic Libraries. Coughlin and D'Ambrosio's edited volume is a welcome contribution to highlighting this issue for gerontologists. The collection is an informative and useful reference for students, researchers, practitioners, planners, and policy analysts. *The Gerontologist*: This solution focused volume fills a gap in the literature by addressing the key issues around mobility and transportation for the aging Baby Boomer generation, issues that will be significantly different than those of previous generations of older adults. This new generation, many of whom will continue to work past the traditional retirement age and expect to pursue an active lifestyle, may have to confront new transportation technology, the need to use public transportation, and ways to continue driving safely as their eyesight fades and reaction time slows down. This volume examines many of the issues faced by policymakers, transportation officials, vehicle manufacturers, health and human services professionals, and aging adults themselves as the largest generation prepares to enter late adulthood. The volume's editors are both at the MIT AgeLab, whose multi-disciplinary team designs, develops, and deploys innovations to enhance quality of life for aging populations. Through the contributions of a diverse group of theorists and practitioners, including recommendations from the National Older Driver Safety Advisory Council, a collaboration between AARP's Driver Safety Program and the MIT AgeLab, the book discusses several key topics pertinent to Aging America and transportation. Among them are the changing demographics of the population, how this generation's lifestyle choices affect mobility, technology trends in private vehicles, changes in the infrastructure and transportation system, the new older driver, and issues of safety and education among older drivers. This book also explores practical solutions and strategies such as new transportation options and innovations that will significantly impact the future of mobility for older adults, for keeping these seniors active and mobile well into their later years. **Key Features**

- Focuses on the unique mobility needs of the aging Baby Boomer generation.
