*The New New Thing: A Silicon Valley Story* Michael M. Lewis, 2000 Tells the unlikely story of Silicon Valley through the life of one of its great achievers Jim Clark who founded Silicon Graphics and Netscape and may be on the verge of another trillion dollar company

*The New New Thing* Michael Lewis, 2000-07-01 **Summary of Michael Lewis's The New New Thing** Everest Media, 2022-06-13T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 Lord Jim Clark was the creator of Netscape and the Internet boom which triggered one of the most astonishing grabfests in the history of capitalism He was always claiming that he wanted to relax but he could not do so for more than a minute He had to change something 2 The Dutch do not enjoy being mistaken for Germans so they find a funny side to life where none exists I told a Dutchman that I was going sailing in the North Sea and he laughed nervously 3 Wolter was the manager of the Huisman Shipyard and he was extremely pessimistic about the new yachts that were being built there He believed that every new yacht that left the yard was an accident waiting to happen 4 The launch of the computerized sailboat Hyperion was delayed due to the weather The head programmer Steve Hague was uncertain about the computer's gauges and accuracy The wind speed gauges had frozen at fifty knots which is the maximum limit

*The New New Thing* Michael Lewis, Michael M. Lewis, 1999 Lewis follows Jim Clark the founder of Silicon Graphics and Netscape as he launches his latest company Healtheon Clark has his next project in mind as well a computerized yacht that he can sail remotely from anywhere in the world

, [The Software License Unveiled](#) Douglas E. Phillips, 2009-06-01 Millions of computer users regularly bind themselves to software license terms with the click of a mouse usually without reading anything but the word agree Licenses for software as diverse as Microsoft Windows and Linux and terms of use for websites such as Facebook are all subject not only to intellectual property and commercial law but also to the private law of the license which comes in many forms each with its advocates Microsoft for example maintains that its proprietary model gives users the rights they need while creating the incentives that have made the United States the global software leader while Richard Stallman creator of the GNU General Public License and author of a number of free software programs asserts that proprietary licensing enables software companies to hoard software they should be sharing In The Software License Unveiled Douglas Phillips looks at both of these extremes and questions how these proliferating but largely unread license terms affect access to software one of the economy's most valuable resources While highlighting the obvious

divergences he makes the more illuminating case that most current models spanning the spectrum from proprietary to free have one key feature in common to an increasing extent each license model extends modifies or displaces public law that would otherwise apply Unlike books that advocate one form of licensing or another this one reframes the debate to propose that going forward a key challenge for lawyers scholars policymakers and the public is to consider whether legislation by license should be the means for controlling software access

other sources At the same time the author analyzes and evaluates the strategic decision making of the firm through 2004 the year in which the founder died While Charles Pankow figures prominently in the narrative the book also describes how others within the firm adapted the business so that the company could survive a commercial market that changed significantly as a result of the recession of the 1990s Extending beyond the scope of most business biographies this book is a study in industry innovation and the power of corporate culture as well as the story of one particular company and the individuals who created it

*Thinking Like Einstein* Thomas G. West,2010-03-05 Albert Einstein once said that all of his most important and productive thinking was done by playing with images in his imagination Only in a secondary stage did he translate with great

effort he says these images into the language of words and mathematics that could be understood by others According to Thomas G West Einstein was a classic example of a strong visual thinker a person who tends to think in images and visual patterns and sometimes has difficulty with words and numbers In his awarding winning book *In the Mind's Eye* West discussed the connections between highly talented visually oriented persons like Einstein and certain learning disabilities such as dyslexia Now in *Thinking Like Einstein* West investigates the new worlds of visual thinking insight and creativity made possible by computer graphics and information visualization technologies He argues that with the rapid spread of inexpensive and powerful computers we are now at the beginning of a major transition moving from an old world based mainly on words and numbers to a new world where high level work in all fields will eventually involve insights based on the display and manipulation of complex information using moving computer images West profiles several highly creative visual thinkers such as James Clerk Maxwell Nikola Tesla and Richard Feynman pointing out that there is a long history of using visualization rather than words or numbers to solve problems Citing the longstanding historical conflicts between image lovers and image haters West examines the relationship of art scientific knowledge and differences in brain capabilities observing how modern visual thinkers with visualization technologies seem to have learned how to cut through the problems of overspecialization in academia and in the workplace West predicts that computer visualization technology will radically change the way we all work and think For thousands of years the technology of writing and reading has tended to promote the dominance of the left hemisphere of the brain with its linear processing of words and numbers Now the spread of graphical computer technologies is permitting a return to our visual roots with a new balance between hemispheres and ways of thinking presenting new opportunities for problem solving and big picture thinking Thus he argues that the newest technologies will help us to reaffirm some of our oldest capabilities allowing us to see previously unseen patterns and to restore a balance in thought and action

*New Media, Old Media* Wendy Hui Kyong Chun, Thomas Keenan, 2006 In this history of new media technologies leading media and cultural theorists examine new media against the background of traditional media such as film photography and print in order to evaluate the multiple claims made about the benefits and freedom of digital media

**Time's Arrow, Time's Cycle** Peter A. Coclanis, 2006 No part of the world has been affected more by globalization in recent decades than Southeast Asia This has led many observers to believe that the region s present experience with globalization is at once unprecedented inevitable and irreversible Professor Peter A Coclanis challenges such beliefs and in so doing provides a history of globalization in Southeast

Asia over the past two millennia Employing Stephen Jay Gould's famous temporal metaphors time's arrow and time's cycle Coclanis traces the trajectory of globalization arguing that globalization has ebbed and flowed in the region over the centuries that globalization is best viewed as a process rather than a permanent condition and that its effects have differed considerably across space and over time Professor Peter A Coclanis is Associate Provost for International Affairs and Albert R Newsome Professor of History and Economics at the University of North Carolina at Chapel Hill He was Raffles Visiting Professor in the Department of History at the National University of Singapore in 2005
