There is a large market demand for new drugs The existing chronic or common ailments without cures development of new diseases with unknown causes and the widespread existence of antibiotic resistant pathogens have driven this field of research further by looking at all potential sources of natural products To date microbes have made a significant contribution to the health and well being of people globally The discoveries of useful metabolites produced by microbes have resulted in a significant proportion of pharmaceutical products in today's market Therefore the investigation and identification of bioactive compounds producing microbes is always of great interest to researchers Actinobacteria are one of the most important and efficient groups of natural metabolite producers Among the numerous genera Streptomyces have been recognized as prolific producers of useful natural compounds as they provide more than half of the naturally occurring antibiotics isolated to date and continue to emerge as the primary source of new bioactive compounds Certainly these potentials have attracted ample research interest and a wide range of biological activities have been subsequently screened by researchers with the utilization of different In vitro and In vivo model of experiments Literature evidence has shown that a significant number of interesting compounds produced by Actinobacteria were exhibiting either strong

anticancer or neuroprotective activity The further in depth studies have then established the modulation of apoptotic pathway was involved in those observed bioactivities These findings indirectly prove the biopharmaceutical potential possessed by Actinobacteria and at the same time substantiate the importance of diverse pharmaceutical evaluations on Actinobacteria In fact many novel compounds discovered from Actinobacteria with strong potential in clinical applications have been developed into new drugs by pharmaceutical companies Together with the advancement in science and technology it is predicted that there would be an expedition in discoveries of new bioactive compounds producing Actinobacteria from various sources including soil and marine sources In light of these current needs and great interest in the scope of this research this book seeks to contribute on the investigation of different biological active compounds producing actinobacteria which are exhibiting antimicrobial antioxidant neuroprotective anticancer activities and similar
