agreeing to refer to its length as our standard That is we assume some arbitrary length in terms of which all space measurements are to be expressed The one actually adopted is the Meter which is the length of a special bar deposited in the French archives This we choose because of the advantages of the metric system which applies only a decimal arithmetic and has a uniform and significant terminology to indicate the multiples and submultiples of a unit *Elements of the Differential Calculus* William Elwood Byerly, 1895 **Syllabus of Geometry** George Albert Wentworth, 1896 Elements of Quaternions Arthur Sherburne Hardy, 1887 *Elements of Analytic Geometry* Arthur Sherburne Hardy, 1888 Elements of the Differential and Integral Calculus Arthur Sherburne Hardy, 1890 *The National Union Catalog, Pre-1956 Imprints* Library of Congress, American Library Association.
