The Nature of Radioactive Fallout and Its Effects on Man United States. Congress. Joint Committee on Atomic Energy,1957 The public hearings on The Nature of Radioactive Fallout and Its Effects on Man had their origin in studies initiated over a year ago in July 1956 by the staff of the Joint Committee on the general subject of long term radiation hazards both from the military and peacetime atomic energy program During the summer recess following the conclusion of the 84th Congress the staff assembled background materials on fallout with primary emphasis on the research aspects Following official announcement of the hearings in March of this year a detailed technical outline describing the proposed scope and subject matter of the hearings was prepared by the staff On April 18 1957 a Special Subcommittee on Radiation under the chairmanship of Representative Chet Holifield of California was established to conduct the hearings and to look into radiation problems in general The hearings which were all open to the public were held on May 27 29 and June 3 7 and covered the major aspects of the fallout problem from its inception in nuclear weapons explosions to its effects on man In all some 50 witnesses either appeared personally before the committee or submitted statements for the record The staff has prepared a summary analysis of the hearings which is aimed at pointing up the more significant information which emerged from the hearings This analysis does not cover all points that were discussed in the hearings An effort was made to describe the general areas of agreement which developed and to delineate those areas in which unresolved questions still exist Foreword

Sexual Paradox: Complementarity, Reproductive Conflict and Human Emergence Christine Fielder,Chris King,2006 Unlocks the keys to the paradox of how sexual selection fertilized the explosion of culture and the resulting fallout in sexual dominion of man over woman and nature How sexuality generates the universe through symmetry broken complementarity The implicit conflict of interests of sexual intrigue in the prisoners dilemma and its ecstatic resolution in the cosmology of love Sexual dominance as a koan for planetary crises 560 pages containing 270 illustrations *Biodiversity and Conservation: Causes and consequences of biodiversity loss 1 : development, habitat loss and invasive species* Richard J. Ladle,2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long

before the word's first appearance in the language in the mid 1980s. In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities. A conclusion also reached said the symposium at a meeting of the Linnaean Society some forty years earlier. By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity. Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement. Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies. It is increasingly taught and studied in universities and other research institutions around the world. Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University's Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates.
