Digital Services in Crisis, Disaster, and Emergency Situations Oliveira, Lúcia, Tajariol, Federico, Gonçalves, Liliana Baptista, 2021-01-29 The contemporary world is characterized by the massive use of digital communication platforms and services that allow people to stay in touch with each other and their organizations On the other hand it is also a world with great challenges in terms of crisis disaster and emergency situations of various kinds Thus it is crucial to understand the role of digital platforms services in the context of crisis disaster and emergency situations Digital Services in Crisis Disaster and Emergency Situations presents recent studies on crisis disaster and emergency situations in

which digital technologies are considered as a key mediator. Featuring multi and interdisciplinary research findings, this comprehensive reference work highlights the relevance of society's digitization and its usefulness and contribution to the different phases and types of risk scenarios. Thus, the book investigates the design of digital services that are specifically developed for use in crisis situations and examines services such as online social networks that can be used for communication purposes in emergency events. Highlighting themes that include crisis management, communication risk, monitoring digital crisis intervention and smartphone applications, this book is of particular use to governments, institutions, corporations and professionals who deal with crisis, disaster and emergency scenarios, as well as researchers, academicians and students working in fields such as communications, multimedia, sociology, political science and engineering.

The Routledge Handbook of Developments in Digital Journalism Studies Scott Eldridge II, Bob Franklin, 2018-09-03. The Routledge Handbook of Developments in Digital Journalism Studies offers a unique and authoritative collection of essays that report on and address the significant issues and focal debates shaping the innovative field of digital journalism studies. In the short time this field has grown, aspects of journalism have moved from the digital niche to the digital mainstay and digital innovations have been normalized into everyday journalistic practice. These cycles of disruption and normalization support this book's central claim that we are witnessing the emergence of digital journalism studies as a discrete academic field. Essays bring together the research and reflections of internationally distinguished academics, journalists, teachers and researchers to help make sense of a reconceptualized journalism and its effects on journalism's products, processes, resources and the relationship between journalists and their audiences. The handbook also discusses the complexities and challenges in studying digital journalism and shines light on previously unexplored areas of inquiry such as aspects of digital resistance, protest and minority voices. The Routledge Handbook of Developments in Digital Journalism Studies is a carefully curated overview of the range of diverse but interrelated original research that is helping to define this emerging discipline. It will be of particular interest to undergraduate and postgraduate students studying digital, online, computational and multimedia journalism.

Social Semantic Web Mining Tope Omitola, Sebastián A. Ríos, John G. Breslin, 2015-01-01. The past ten years have seen a rapid growth in the numbers of people signing up to use Web-based social networks: hundreds of millions of new

members are now joining the main services each year with a large amount of content being shared on these networks tens of billions of content items are shared each month With this growth in usage and data being generated there are many opportunities to discover the knowledge that is often inherent but somewhat hidden in these networks Web mining techniques are being used to derive this hidden knowledge In addition the Semantic Web including the Linked Data initiative to connect previously disconnected datasets is making it possible to connect data from across various social spaces through common representations and agreed upon terms for people content items etc In this book we detail some current research being carried out to semantically represent the implicit and explicit structures on the Social Web along with the techniques being used to elicit relevant knowledge from these structures and we present the mechanisms that can be used to intelligently mesh these semantic representations with intelligent knowledge discovery processes We begin this book with an overview of the origins of the Web and then show how web intelligence can be derived from a combination of web and Social Web mining We give an overview of the Social and Semantic Webs followed by a description of the combined Social Semantic Web along with some of the possibilities it affords and the various semantic representation formats for the data created in social networks and on social media sites Provenance and provenance mining is an important aspect here especially when data is combined from multiple services We will expand on the subject of provenance and especially its importance in relation to social data We will describe extensions to social semantic vocabularies specifically designed for community mining purposes SIOCM In the last three chapters we describe how the combination of web intelligence and social semantic data can be used to derive knowledge from the Social Web starting at the community level macro and then moving through group mining meso to user profile mining micro Table of Contents Acknowledgments Grant Aid Introduction and the Web Web Mining The Social Web The Semantic Web The Social Semantic Web Social Semantic Web Mining Social Semantic Web Mining of Communities Social Semantic Web Mining of Groups Social Semantic Web Mining of Users Conclusions
