

The image shows two Greater Prairie-Chickens in flight against a clear blue sky. The bird in the foreground is lower and more spread out, showing its wings and tail. The bird in the background is higher and more compact. Both birds have brown and white streaked feathers and distinctive orange patches on their heads. The ground below is a dry, grassy field.

Online Booming Mists Nowhere Greater Prairie Chicken:

Booming from the Mists of Nowhere Greg Hoch, 2015-12-15 For ten months of the year the prairie chicken's drab colors allow it to disappear into the landscape. However in April and May this grouse is one of the most outrageously flamboyant birds in North America. Competing with each other for the attention of females, males gather before dawn in an explosion of sights and sounds booming from the mists of nowhere as Aldo Leopold wrote decades ago. There's nothing else like it and it is perilously close to being lost. In this book, ecologist Greg Hoch shows that we can ensure that this iconic bird flourishes once again. Skillfully interweaving lyrical accounts from early settlers, hunters, and pioneer naturalists with recent scientific research on the grouse and its favored grasslands, Hoch reveals that the prairie chicken played a key role in the American settlement of the Midwest. Many hungry pioneers regularly shot and ate the bird, as well as trapping hundreds of thousands, shipping them eastward by the trainload for coastal suppers. As a result of both hunting and habitat loss, the bird's numbers plummeted to extinction across 90 percent of its original habitat. Iowa, whose tallgrass prairies formed the very center of the greater prairie chicken's range, no longer supports a native population of the bird, most symbolic of prairie habitat. The steep decline in the prairie chicken population is one of the great tragedies of twentieth-century wildlife management and agricultural practices. However, Hoch gives us reason for optimism. These birds can thrive in agriculturally productive grasslands. Careful grazing, reduced use of pesticides, well-placed wildlife corridors, planned burning, higher plant and insect diversity—these are the keys. If enough blocks of healthy grasslands are scattered over the midwestern landscape, there will be prairie chickens and many of their fellow creatures of the tall grasses. Farmers, ranchers, conservationists, and citizens can reverse the decline of grassland birds and insure that future generations will hear the booming of the prairie chicken.
