Computational Modelling of Concrete and Concrete Structures Günther Meschke, Bernhard Pichler, Jan G. Rots, 2022-05-22 Computational Modelling of Concrete and Concrete Structures contains the contributions to the EURO C 2022 conference Vienna Austria 23-26 May 2022. The papers review and discuss research advancements and assess the applicability and robustness of methods and models for the analysis and design of concrete fibre reinforced and prestressed concrete structures as well as masonry structures. Recent developments include methods of machine learning, novel discretisation methods, probabilistic models and consideration of a growing number of micro structural aspects in multi scale and multi physics settings. In addition, trends towards the material scale with new fibres and 3D printable concretes and life cycle oriented models for ageing and durability of existing and new concrete infrastructure are clearly visible. Overall, computational robustness of numerical predictions and mathematical rigour have further increased, accompanied by careful model validation based on respective experimental programmes. The book will serve as an important reference for both academics and professionals, stimulating new research directions in the field of computational modelling of concrete and its application to the analysis of concrete structures. EURO C 2022 is the eighth edition of the EURO C conference series after Innsbruck 1994, Bad Gastein 1998, St. Johann im Pongau 2003, Mayrhofen 2006, Schladming 2010, St. Anton am Arlberg 2014 and Bad Hofgastein 2018. The overarching focus of the conferences is on computational methods and numerical models for the analysis of concrete and concrete structures.

Structural Health Monitoring Charles R. Farrar, Keith Worden, 2012-11-19

Written by global leaders and pioneers in the field this book is a must have read for researchers practicing engineers and university faculty working in SHM

Structural Health Monitoring A Machine Learning

Perspective is the first comprehensive book on the general problem of structural health monitoring. The authors, renowned experts in the field, consider structural health monitoring in a new manner by casting the problem in the context of a machine learning statistical pattern recognition paradigm. First explaining the paradigm in general terms, then explaining the process in detail, with further insight provided via numerical and experimental studies of laboratory test specimens and in situ structures. This paradigm provides a comprehensive framework for developing SHM solutions. Structural Health Monitoring: A Machine Learning Perspective makes extensive use of the authors' detailed surveys of the technical literature, the experience they have gained from teaching numerous courses on this subject, and the results of performing numerous analytical and experimental structural health monitoring studies. Considers structural health monitoring in a new manner by casting the problem in the context of a machine learning statistical pattern recognition paradigm. Emphasises an integrated approach to the development of structural health monitoring solutions by coupling the measurement hardware portion of the problem directly with the data interrogation algorithms. Benefits from extensive use of the authors' detailed surveys of 800 papers in the technical literature and the experience they have gained from teaching numerous short courses on this subject.
