Climate Conscious Low-Energy Tropical Built Environment (Penerbit USM) Abdul Malek Abdul Rahman ,Karam Mustafa Al-Obaidi,2019-08-09 Climate Conscious Low Energy Tropical Built Environment is a welcome addition to the knowledge on green and sustainable architecture Both the authors shared their vast knowledge and experience on low energy and passive solar design The approach is on the technology adapted and applied to welcoming the sun as well as to rejecting the sun with the emphasis on the passive elements design As the world now is facing the rapid increase of population the architects need to consider the future path of the built environment A good knowledge in low energy built environment in order to sustain the well being of the earth is essential before considering on the aspects of mechanical components This book is written in a clear and engaging style to suit all readers the architecture and built environment students and professions as well as readers in general As there are

many books on this topic but none emphasize the context of tropical climate This is the first book on the low energy built environment within the context of tropical climate Abdul Malek Abdul Rahman was interested in indoor thermal comfort while researching his PhD topic on Design for Natural Ventilation in Low Cost Housing in Tropical Climate With a firm belief that to be thermally comfortable without mechanical aids in tropical climates one should be under shade and receiving ample air movement concurrently which is not naturally possible Therefore he sets out for further researches literatures and acute observations on this issue With university research funds he investigated in hypothesis and experimented on low cost cooling technologies attended and read books and references on related topics Equipped with reliable cameras he captured ideas and happenings spontaneously to confirm his conviction He believes that in order to re examine the philosophy of energy efficient architectural design one has to detach oneself from architecture and to understand other related disciplines mechanical engineering to be exact in order to value add and upgrade the architecture towards sustainability He finds the future is very challenging on this issue as population increase is real and that when left unchecked would affect the comfort of human psyche Technology now is the solution and research must include latest technology available during the particular time of change Karam Mustafa Al Obaidi has interest in architectural design systems specifically in the tropics He focuses on dynamic environment in relation with surroundings His research is towards energy and how it influences the architectural form With university research funds he implemented experimental investigation to obtain reliable examination of the built environment The future of architecture in terms of technology is challenging in this tropical region He finds that understanding energy in both consumption and efficiency is limited due to the climatic constraints Therefore he believes that creating a platform to integrate related disciplines could provide solutions regarding the issue of energy efficiency In his opinion nature is the main source of inspiration thus designing models that respond to tropical environment could provide comfort and durability for users and buildings

The Emperor's Clothes Ryan Darwish, 2007-02-19. There is little dispute that the economy of the United States has many difficult future challenges. The astronomical budget deficits require massive and growing indebtedness to fund. The loss of competitive advantage of many key industries in the United States has led to a hemorrhaging of dollars to countries such as China, India, and the oil-producing countries. An aging population poorly prepared for their retirement years with declining health will lead to increasing claims on our Federal entitlement system. Corruption, ethical malfeasance, and engagement in an endless war against a poorly defined enemy promises to continue draining the productive economic, emotional, and psychological resources of the United States. At the same time, the United States remains dependent for its energy supplies on countries and regions which do not look favorably upon the United States. Consideration of the implications of these circumstances upon one's personal financial and investment decisions is crucial. This book provides a framework and guidance for thinking about the risks and opportunities in this economic and investment climate.
