New Rules of Sociological Method Anthony Giddens, 2013-06-10 This is a new and revised edition of a book which has already established itself as a basic text in social theory The first section of the work provides a concise critical analysis of some leading schools of thought in social philosophy giving particular attention to phenomenology ethnomethodology and Wittgensteinian thought Giddens concentrates primarily upon the implications of these various perspectives for an account of human action and its intelligibility An action approach on its own however will not do in human social life action and structure presuppose one another The author therefore moves on to provide a series of concepts relevant to understanding the production and reproduction of society The book concludes with a succinct statement of some new rules of sociological method Representing the first and most trenchant exposition of the principles of structuration theory this edition also contains a substantial new Introduction in which Giddens replies to some of the more persistent criticisms made of the original version and also addresses some important issues originally discussed only in a cursory way

New Rules of Sociological Method Anthony Giddens, 1984 *Between Daily Routine and Violent Protest* Ernst Wolff, 2021-06-21 Most human action has a technical dimension This book examines four components of this technical dimension First in all actions various individual organizational or institutional agents combine actional capabilities with tools institutions infrastructure and other elements by means of which they act Second the deployment of capabilities and means is permeated by ethical aspirations and hesitations Third all domains of action are affected by these ethical dilemmas Fourth the dimensions of the technicality of action are typical of human life in general and not just a regional or culturally specific phenomenon In this study an interdisciplinary approach is adopted to encompass the broad anthropological scope of this study and combine this bigger picture with detailed attention to the socio historical particularities of action as it plays out in different contexts

Hermeneutics the philosophical inquiry into the human phenomena of meaning understanding and interpretation and social science as the study of all human affairs are the two main disciplinary orientations of this book This study clarifies the technical dimension of the entire spectrum of human action ranging from daily routine to the extreme of violent protest
