Catalysts for the Controlled Polymerization of Conjugated Dienes Marc Visseaux, 2020-12-10 Since the beginning of the 1960s the coordinative polymerization of conjugated dienes has continuously improved Today chemists know how to polymerize conjugated dienes stereospecifically and in a controlled fashion both petro sourced nowadays also bio sourced and those of natural origin The industry has greatly improved the performances of the catalytic systems covering a wide range of elements including metals from groups 4 6 and 8 10 and rare earths with the aim of optimizing the preparation of synthetic polymers for a large range of industrial applications Nowadays there is a better understanding of the polymerization mechanism involving allyl active species thanks in particular to the support of more efficient calculation methods In addition statistical copolymerization of 1 3 dienes with olefin or styrene comonomers and innovative approaches to coordinative chain transfer polymerization allow the production of copolymers with controlled topology while a last challenge is about to be solved with the preparation of stereoregular polydienes that are also end functionalized This issue brings together several important aspects of this chemistry that remain at the forefront of both academic and industrial research

The Proteasome in Neurodegeneration Leonidas Stefanis, J. N. Keller, 2007-08-02 In the last 50 years a wealth of information has allowed us to understand the contribution of various regulatory factors that alter mRNA and protein s thesis to a variety of physiological and pathological conditions However such regulation is only one of many factors that contribute to the levels of a given p tein One major factor that has been relatively obscure until recently has been the contribution of protein degradation to the regulation of the steady state level of protein expression and protein function This rapidly evolving field has made a significant mark on the scientific community as highlighted by the Award of the Nobel Prize in Chemistry for 2004 to Aaron Ciechanover Avram Hershko and Irwin Rose for their pioneering work on the ubiquitin proteasome system UPS of protein degradation which is the subject of this volume In recent years e dence has been accumulating that suggests a role for UPS function in both ph iological and pathological settings In particular studies have implicated a central role for the UPS in cell cycle regulation cancer and neurodegeneration Two points are however worth bearing in mind First ubiquitin s function appears to extend far beyond the UPS and protein degradation second there are other important systems of intracellular protein degradation most notably autophagic systems through the lysosomes and these may also be involved in disease pat physiology
