## **Nice Book Climate Change Everyone Needs Know:**

**The Coming Chaos** Ken Casey, 2018-04-13 The Coming Chaos By Ken Casey This book describes the coming chaos that will result in the year 2100 if the world fails to develop a workable nuclear breeder reactor In 2100 the world will be depleted of all but the most expensive oil gas and coal The world will also be largely depleted of the uranium that is used in conventional nuclear reactors The result will be a shutdown of the world electric grid and a shutdown of all vehicular traffic In 2100 the world will have an estimated population of 11 billion people By 2150 the population of the world will plummet to 3 billion people if something is not done soon In order to have a seamless transition into the 22nd century the world must make a concerted effort today to develop nuclear breeder reactors to keep the world electric grid functioning in 2100 The most likely candidate appears to be the Molten Salt breeder reactor also known as the Liquid Fluoride Thorium Reactor With nuclear breeder reactors the world will have electric vehicles at their disposal However for long distance travel the world must continue development of ammonia fueled vehicles The best candidate appears to be a prototype hybrid electric ammonia fueled vehicle that is being promoted by the South Koreans By 2100 the carbon dioxide in the world's atmosphere will increase by over 3 trillion tons This is inevitable without change It will result in temperatures approximately 6 degrees higher 3.5 C than today Virtually all the glaciers of the world except in the Himalayas will completely melt which will devastate agriculture in the Far East The world's oceans will rise by about 5.9 feet in 2100 which will inundate over 100 million homes and play havoc with the coastal cities of the world All of this can be ameliorated if the world limits the use of fossil fuels in favor of ammonia fuels and switches to the use of nuclear breeder reactors Climate Future Robert S. Pindyck, 2022 The fundamental problem What we know and don't know about climate change The role of uncertainty in climate policy Climate policy and climate change what can we expect What to do reducing net emissions What to do adaptation **Climate Change** Joseph J. Romm, 2016 Climate change will have a bigger impact on humanity than the Internet has had This entry in the What Everyone Needs to Know series offers the most up to date examination of climate change's foundational science as well as its implications for our future and its core solutions Alongside detailed but highly accessible descriptions of what is causing climate change this book answers questions about the practical implications of this growing force on our world As the world struggles to stem climate change and its effects everyone will become a part of this story of the century Here is what you need to know **The Great Invention** Ehsan Masood, 2016-06-07 The world's principal measure of the health of economies is gross domestic product or GDP the sum of what all of us spend every day from the contents of our weekly shopping to large capital spending by businesses GDP also includes the myriad things that our governments pay for from libraries and road line painting to naval dockyards and nuclear weapons The Great Invention reveals how in just a few decades GDP became the world's most powerful formula how six algebraic symbols forged in the fires of the 1930's economic crisis helped Europe and America prosper how the remedy now risks killing the patient it once

saved and how this fundamentally flawed metric is creating the illusion of global prosperity and why many world leaders want to be able to ignore it but so far remain powerless to do so Drawing on interviews firsthand accounts and previously neglected source materials *The Great Invention* takes readers on a journey from Capitol Hill to Whitehall on the trail of theories made in Cambridge tested in Karachi and designed for global application into the minds of unworldly geniuses seduced by the allure of power and the demands of politics

*Why Ecology Matters* Charles J. Krebs, 2016-05-25 Global temperatures and seawater levels rise the world's smallest porpoise species looms at the edge of extinction and a tiny emerald beetle from Japan flourishes in North America but why does it matter Who cares With this concise accessible and up to date book Charles J Krebs answers critics and enlightens students and environmental advocates alike revealing not why phenomena like these deserve our attention but why they demand it Highlighting key principles in ecology from species extinction to the sun's role in powering ecosystems each chapter introduces a general question illustrates that question with real world examples and links it to pressing ecological issues in which humans play a central role such as the spread of invasive species climate change overfishing and biodiversity conservation While other introductions to ecology are rooted in complex theory math or practice and relegate discussions of human environmental impacts and their societal implications to sidebars and appendices *Why Ecology Matters* interweaves these important discussions throughout It is a book rooted in our contemporary world delving into ecological issues that are perennial timeless but could not be more timely

*A Moral History of Monetary and Fiscal Policies* Valentin Lazea, 2024-07-24 Did you know that the first paid holiday was introduced by Germany in 1903 Or that Frank L Baum wrote *The Wizard of Oz* inspired by the march of Ohioan unemployed upon Washington D C Or that until 1974 married American women could not own a credit card without their husbands approval All these things and many more you can find in the book *A Moral History of Monetary and Fiscal Policies* written by the National Bank of Romania's Chief Economist Valentin Lazea The volume targets specialists in history economics or sociology but also lay people The three parts of the volume finish with three provocative questions Did the Gold Standard era represent a period of fierce exploitation of the working class Did the rise of Nazism represent an inevitable consequence of orthodox macroeconomic policies Was Nicolae Ceausescu wrong in repaying all Romania's external debt in the 80s

**Principles of International Energy Transition Law** Frédéric G. Sourgens, Leonardo Sempertegui, 2023-10-04 Energy transition is a complex global problem with governance and policies cutting across multiple legal silos including human rights environment international economics finance energy law of the sea and transnational commerce As of yet there is no comprehensive treatment of the legal principles governing energy transition as a whole Furthermore energy transition must solve a trilemma that pits energy equity the need to provide access to energy needed to fuel human development and energy security the need to provide resilient and reliable energy systems against environmental sustainability Without a comprehensive understanding of these issues law and policy makers risk exacerbating rather than resolving the underlying problems Principles of

International Energy Transition Law introduces the energy transition problem by situating the climate emergency in its broader energy and development context showing how global energy value chains are deeply enmeshed in and drive global economic and human development It combines the different legal perspectives in one consistent analysis by outlining their interactions and showing how they can be reconciled The book discusses thirty two international legal principles governing different aspects of the energy transition trilemma s three parts It then uses a commons governance perspective to propose a holistic approach to applying and balancing these different parts and their different legal principles Highlighted sections summarise the most important concepts and ideas for easy reference making the title particularly accessible for students and policy makers as well as law practitioners

**The Great Reset** Marc Morano, 2022-08-30 Here is the antidote to the left s sinister push to use a worldwide crisis to infuse our lives with the values of colossal statism and dystopian self hatred all accelerated by the duplicitous manipulation of the recent pandemic From the nationally best selling author of The Politically Incorrect Guide to Climate Change Welcome to 2030 I own nothing have no privacy and life has never been better This is the vision of the Great Reset according to globalist leaders While proponents of the Great Reset push slogans like Build Back Better The Fourth Industrial Revolution and A New Normal the Reset is nothing short of a rebranded Soviet system threatening to strip away property rights restrict freedom of movement and association and radically reshape our diets and way of life In The Great Reset Global Elites and the Permanent Lockdown bestselling author and ClimateDepot.com publisher Marc Morano unveils the origins of the Great Reset who is behind it how it is being implemented and how COVID 19 and the alleged climate emergency accelerated its imposition on the United States Packed with telling statistics and damning quotes The Great Reset is the essential handbook for the public the media and activists on how to critically analyze and expose the tyrannical policies silently strangling our liberties today
