### **Students' Preference for Skipping Questions in Exams with Negative Marking** Hyun Cho, Yong-Ju Lee, 2022

Studies have shown that female students are more likely to skip questions than male students on exams that penalize incorrect answers. They have mostly focused on either gender differences in test scores, i.e., female students' lower test scores due to skipping, or the heterogeneity analysis, i.e., analysis based on ability, age, and stakes. In this study, we contribute to this body of literature by formalizing based on an expected utility theory that those who are more risk averse or less confident are more likely to skip a question. Furthermore, we present empirical evidence for gender difference in skipping based on data from college students, while previous studies mostly examined high school ones. For the empirical analysis, we used two times of in-class quizzes administered two months apart and found that female students are 91.4% more likely than male students to skip at least a question. In addition, gender difference in skipping is larger among high-performing students.
