Cognitive Science Rom Harré, 2002-02-18 This is the first major textbook to offer a truly comprehensive review of cognitive science in its fullest sense Ranging from artificial intelligence models of neural processes and cognitive psychology to recent discursive and cultural theories Rom Harré offers an original yet accessible integration of the field At its core this textbook addresses the question How can psychology become a science The answer is based on a clear account of method and explanation in the natural sciences and how they can be adapted to psychological research Rom Harré has used his experience of both the natural and the human sciences to create a text on which exciting and insightful courses can be built in many ways The text is based on the idea that underlying the long history of attempts to create a scientific psychology there are many unexamined presuppositions that must be brought to light Whether describing language categorization memory the brain or connectionism the book always links our intuitions about how we think feel and act in the contexts of everyday life to the latest accounts of the neural tools with which we accomplish the cognitive tasks demanded of us Computational and biological models are used to link the discursive analysis of everyday cognition to the necessary activities of the brain and nervous system Fluently written and well structured this is an ideal text for students who want to gain a comprehensive view of the current state of the art with its seeming divergence into studies of meanings and studies of neurology The book is divided into four basic modules with suggestions for three lectures in each The plan is related to the overall pattern of the semester programme The reader is guided with helpful learning points sections of study questions for review and key readings for each chapter Cognitive Science A Philosophical Introduction with its remarkable sweep of themes past and present truly introduces the science of the mind for a new generation of psychology students Cognitive Science should be indispensable reading for students at all levels taking courses in cognitive science and cognitive psychology and useful

Life and Death in Freud and Heidegger Havi Carel, 2006 Life and Death in Freud and Heidegger argues that mortality is a fundamental structuring element in human life The ordinary view of life and death regards them as dichotomous and separate This book explains why this view is unsatisfactory and presents a new model of the relationship between life and death that sees them as interlinked Using Heidegger's concept of being towards death and Freud's notion of the death drive it demonstrates the extensive influence death has on everyday life and gives an account of its structural and existential significance By bringing the two perspectives together this book presents a reading of death that establishes its significance for life creates a meeting point for philosophical and psychoanalytical perspectives and examines the problems and strengths of each It then puts forth a unified view based on the strengths of each position and overcoming the problems of each Finally it works out the ethical consequences of this view This volume is of interest for philosophers mental health practitioners and those working in the field of death studies
