Network Learning and Propagation Dynamics

Analysis Xuzhen Zhu, Fei Xiong, Shirui Pan, Yi Zhang, Ningbo Zhang, 2025-05-08 Many phenomena in the fields of computer science biology sociology and economics can be described as transmission dynamics on complex networks and transmission dynamics mainly includes information transmission disease transmission and computer virus transmission In many real propagation phenomena we often want to know their propagation mechanism and law on complex networks as well as their prediction methods and control means Clarifying the above problems allows people to have a clear and comprehensive understanding of the evolution mechanism propagation process and steady state of real phenomena At the same time it also provides some necessary theoretical support for predicting and controlling real systems In recent years many concepts and methods of statistical physics have also been successfully used in the modeling and calculation of complex networks such as statistical mechanics self organization theory critical and phase transition theory seepage theory and so on In complex networks seepage can simulate and describe the growth and evolution characteristics of many natural and social systems Based on the classical network seepage people have carried out a lot of research on the explosive seepage in the process of network growth in recent years Using the seepage method researchers have drawn many conclusions and brought new ideas in the research directions of network propagation and cascade failure Based on these theories many researchers have quantitatively analyzed the influence of many factors on transmission path and transmission mechanism and then discussed the effect of the control strategy

Network Analysis and Tourism Noel Scott, Rodolfo Baggio, Chris Cooper, 2008 This text provides a comprehensive review of the contribution of network analysis to the understanding of tourism destinations and organisations It discusses both the theoretical and methodological underpinnings of network analysis and then illustrates the relevance of this approach in a series of tourism applications

Advancing neural network-based intelligent algorithms in robotics: challenges, solutions, and future perspectives Long Jin, Xin Ma, 2025-09-15 The integration of neural network based intelligent algorithms with robotics has revolutionized the field of robotics in recent years Inspired by the human brain

neural networks have shown great potential in enabling robots to learn from data make intelligent decisions and perform complex tasks These algorithms have been applied in various areas of robotics including perception control planning and learning More precisely convolutional neural networks CNNs have significantly improved robot vision capabilities while recurrent neural networks RNNs have enhanced sequential data processing for tasks such as speech recognition and natural language understanding Deep reinforcement learning algorithms have enabled robots to learn optimal control policies through interaction with their environment Additionally re current neural networks have contributed to the stability control performance improvement and redundancy resolution of robots The continuous advancements in neural network based algorithms in robotics holds great promise for the future of intelligent robotic systems
