Global report on the state of dietary data Food and Agriculture Organization of the United Nations, Intake - Center for dietary assessment, 2022-03-09 Diet and nutrition are critical to health well being and longevity The economic and health burdens associated with poor quality diets are a worldwide concern but for low and middle income countries LMICs the long term impact of these burdens has the potential to be especially devastating Many of these LMICs are currently grappling with the deepening multiple burdens of malnutrition with undernutrition nutrient inadequacies and overweight and obesity often presenting simultaneously in communities households and even in single individuals Time relevant data is a necessary and critical component of any process or initiative that aims to ensure healthy diets Robust data on what people eat in a country enables an understanding of current food consumption practices and provides an evidence based foundation for the design and implementation of targeted and well informed actions policies and messaging to address the key issues related to healthy eating The purpose of this report is to take stock and celebrate

the collection and use of dietary data in LMICs and generate further momentum for investment in government led dietary surveys in LMICs Section 1 provides a global overview of dietary surveys carried out in LMICs from 1980 through 2019 analysing key characteristics and trends over time Section 2 celebrates the increased investment in dietary surveys in LMICs by highlighting country stories related to dietary survey initiation implementation and data use Section 3 is aimed at generating further momentum for investment in government led dietary surveys in LMICs by illustrating through data visualizations the type of information dietary data can provide for policy makers

Global Malnutrition Victor Healey, AI, 2025-03-10 Global Malnutrition explores why malnutrition remains a critical global issue despite advancements in agriculture and medicine It examines undernutrition micronutrient deficiencies and overnutrition highlighting their impacts on health economic productivity and societal progress The book argues that solving global malnutrition requires a blend of agricultural innovation socioeconomic empowerment and political reform One surprising insight is the extent to which political instability and corruption hinder effective food distribution exacerbating food insecurity The book adopts an interdisciplinary approach drawing from public health economics and political science to analyze the complex factors influencing global nutrition It progresses from defining malnutrition to exploring agricultural socioeconomic and political drivers By integrating diverse perspectives the book provides a comprehensive understanding of the causes effects and potential solutions to malnutrition making it valuable for policymakers and practitioners in public health and international development A key aspect discussed is how environmental factors like climate change and land degradation contribute significantly to food insecurity affecting vulnerable populations disproportionately

Accounting for dietary deprivations in rural Africa: Poor households, poor farms or poor food environments? Block, Steven, Ecker, Olivier, Headey, Derek D., Comstock, Andrew R., 2023-07-07 Agricultural and food policies are increasingly asked to do more to improve the dietary quality of populations in lower and middle income countries LMICs especially severely malnourished rural populations However the appropriate strategy for improving diet quality remains an open question Agriculture has traditionally focused on food security and poverty reduction mostly through investments in staple crops while social protection programs have also sought to improve diets through poverty reduction Nutrition sensitive agriculture programs traditionally emphasize farm level diversification into nutrient dense crops and or livestock combined with nutrition education More recently some researchers have moved beyond the farm to assess the role of market access and local food environments more generally though little research has focused on food environments in rural Africa In this study we explore the determinants of a new and improved measure of household diet deprivation s that measure consumption gaps for diets as a whole as well as gaps for individual food groups Using national datasets for rural Nigeria Ethiopia and Tanzania we conduct a racehorse regression analysis that reveals strong support for the role of wealth in reducing dietary deprivation evidence that livestock diversification is important but not crop diversification and indications that local farming systems are also strongly

associated with dietary outcomes but market access indicators are not. While more research is needed we conclude that the evidence supports strategies that combine income wealth enhancement objectives with livestock diversification where possible. Evidence on the linkages between food environments and diet quality in rural areas of LMICs is currently too limited and warrants further research of the observational and experimental variety. **Global Nutrition Report 2014**

United States. Congress. House. Committee on Appropriations. Subcommittee on State, Foreign Operations, and Related Programs, 2012. Geriatric Medicine Michael R. Wasserman, Debra Bakerjian, Sunny Linnebur, Sharon Brangman, Matteo Cesari, Sonja Rosen, 2024-02-19. Both volumes sold as a combined set for a one time purchase. Older adults represent the most rapidly growing demographic in the U S and in many developed countries around the world. The field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature. Medicare and Medicaid expenditures related to older adults are nearly a trillion dollars year in the US. How our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance. According to the Institute of Medicine physicians and other healthcare professionals receive an

inadequate amount of training in geriatric medicine Geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life It is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about the geriatric approach to care Geriatric medicine varies from most other fields in medicine While many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants Geriatricians are used to caring for 90 year olds with multiple chronic illnesses Their variable physiology leads to uncertain responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care Practicing geriatric medicine requires the ability to see patterns But it goes one step further as the rules are constantly in flux Every patient is an individual with particular needs and goals In order to provide true person centered care to older adults one has to incorporate these factors into the decision making process The proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience Basic science and the physiology of aging create a background but are not the main focus This is because every chapter has been written through the lens of person centered care This book is about focusing on what matters to the person and how that is not always about pathology and physiology The reader generally will not find simple solutions to symptoms diseases and syndromes In fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time Geriatrics encompasses multiple disciplines and spans all of the subspecialties It requires knowledge of working within an interdisciplinary team It requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary And most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care This book aims to serve as an unparalleled resource for meeting these challenges Updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine **Food,**
