

NUTRITION & METABOLISM

The body must obtain energy through breathing. Food is the body's fuel and provides energy. Metabolism breaks down nutrients into simpler forms. Several other compounds that undergo metabolic reactions enter cells before the energy is released. The metabolic reactions involving primarily glucose produce carbon dioxide, water, and energy in three stages.

Level 1: Carbohydrate Carbohydrates

Carbohydrates are made from the six elements: the oxygen of the atom, hydrogen atoms, and carbon atoms. They are also in their most basic form: glucose, fructose, and sucrose. (Other carbohydrates are made from these three sugars.)
