Women's Health in an Interdisciplinary Dimension - Determinants of Nutritional Disorders Karolina

Krupa-Kotara, Patxi León Guereño, Izabella Uchmanowicz, Michał Czapla, 2024-10-10 The increase in the prevalence of diet related diseases in the female population since the second half of the 20th century is likely the result of increasing life expectancy combined with increased exposure to environmental factors including lifestyle To date the exact mechanism for the development of many nutrition related diseases remains unknown Mainly because of the multifactorial etiology It is often forgotten that human biology and pathophysiology are regulated at the level of gene expression Genetics loads the gun but the environment pulls the trigger by Judith Stern illustrates the complex relationship between diseases and environmental factors The analogy accurately conveys that disease phenotypes are not only the result of interactions between different genes but also between genes and environmental determinants

Dietary and Nutritional Indices and Chronic

Diseases Sorayya Kheikouri, Mohammad Alizadeh, Masayo Nakamori Rossignoli, 2024-03-06 Chronic diseases such as diabetes cardiovascular diseases and cancers are known as a substantive worldwide challenge for health systems and are major contributors to mortality and morbidity According to the World Health Organization 71% of all deaths and 63.8 % of Disability Adjusted Life Years DALYs are attributed to chronic diseases The composition of a diet influences health status and affects the occurrence and severity of chronic diseases As different components of a diet correlate and interact with one another addressing only individual dietary constituents does not usually help in analyzing the extent to which diets may prevent or contribute to the development or progress of chronic diseases In recent years the concept of dietary indices has received more attention by both researchers and clinicians and is used as a means to capture the overall effect of a diet on a specific disease or a group of related illnesses These indices are nutritionally derived mathematical algorithms which are developed on the bases of useful or detrimental nutrients and or food groups Thus the indices are frequently used to elucidate proper aspects of a specific diet such as quality diversity anti inflammatory anti oxidative and or anti glycation potential and acid load Examples include the dietary inflammatory index DII dietary total antioxidant capacity DTAC healthy eating index HEI dietary acid load and so forth There is accumulating evidence indicating a link between scores of dietary and nutritional indices and health outcomes
