Search for ExtraTerrestrial Intelligence Stelio Montebugnoli, Andrea Melis, Nicolò Antonietti, 2021-03-27 This book presents the latest knowledge of the newly discovered Earth like exoplanets and reviews improvements in both radio and optical SETI. A key aim is to stimulate fresh discussion on algorithms that will be of high value in this extremely complicated search. Exoplanets resembling Earth could well be able to sustain life and support the evolution of technological civilizations but to date all searches for such life forms have proved fruitless. The failings of SETI observations are well recognized and a new search approach is necessary. In this book different detection algorithms that exploit state of the art low cost and extremely fast multiprocessors are examined and compared. Novel methods such as the agnostic entropy and high sensitivity blind signal extraction algorithms should represent a quantum leap forward in SETI. The book is of interest to all researchers in the field and hopefully stimulates significant progress in the search for extraterrestrial intelligence. **PC Mag**, 2001-12-11
