Biological Consequences of Socioeconomic Inequalities Barbara Wolfe, William Evans, Teresa E. Seeman, 2012-11-09 Social scientists have repeatedly uncovered a disturbing feature of economic inequality people with larger incomes and better education tend to lead longer healthier lives This pattern holds across all ages and for virtually all measures of health apparently indicating a biological dimension of inequality But scholars have only begun to understand the complex mechanisms that drive this disparity How exactly do financial well being and human physiology interact The Biological Consequences of Socioeconomic Inequalities incorporates insights from the social and biological sciences to quantify the biology of disadvantage and to assess how poverty gets under the skin to impact health Drawing from unusually rich datasets of biomarkers brain scans and socioeconomic measures Biological Consequences of Socioeconomic Inequalities illustrates exciting new paths to understanding social inequalities in health Barbara Wolfe William N Evans and Nancy Adler begin the volume with a critical evaluation of the literature on income and health providing a lucid review of the difficulties of establishing clear causal pathways between the two variables In their chapter Arun S Karlamangla Tara L Gruenewald and Teresa E Seeman outline the potential of biomarkers such as cholesterol heart pressure and C reactive protein to assess and

indicate the factors underlying health Edith Chen Hannah M C Schreier and Meanne Chan reveal the empirical power of biomarkers by examining asthma a condition steeply correlated with socioeconomic status Their analysis shows how stress at the individual family and neighborhood levels can increase the incidence of asthma The volume then turns to cognitive neuroscience using biomarkers in a new way to examine the impact of poverty on brain development Jamie Hanson Nicole Hair Amitabh Chandra Ed Moss Jay Bhattacharya Seth D Pollack and Barbara Wolfe use a longitudinal Magnetic Resonance Imaging MRI study of children between the ages of four and eighteen to study the link between poverty and limited cognition among children Michelle C Carlson Christopher L Seplaki and Teresa E Seeman also focus on brain development to examine the role of socioeconomic status in cognitive decline among older adults Featuring insights from the biological and social sciences *Biological Consequences of Socioeconomic Inequalities* will be an essential resource for scholars interested in socioeconomic disparities and the biological imprint that material deprivation leaves on the human body

General Principles and Etiology James Wilson, 2013-06-29 In less than 40 years teratology has grown from a little known discipline concerned with studies on the effects of a few physical and chemical stresses on developing fish amphibians and birds to a discipline embracing a vast accumulation of literature on experimental studies in many animal forms and the results of intensive scrutiny of human development under varied conditions as well Emphasis has shifted from preoccupation with descriptions of anatomical defects to concern about subtle and interacting causative factors to searches for the early reactions to these at the cellular and subcellular levels and to identification of abnormality in the chemical the functional and the ultrastructural realms These changes in orientation have quite naturally made necessary the recruitment of concepts methods and expertise from other disciplines Hence the foundations of teratology which once were largely morphological have extended into genetics biochemistry molecular biology reproductive physiology epidemiology and several aspects of veterinary and clinical medicine It is not surprising that a student or new investigator approaching the field of teratology may feel some dismay when confronted with the confusing array of cross disciplinary concepts and principles it encompasses today One of the aims of this work is to introduce what the editors believe is a logical thread of continuity into a field that may be regarded by some as a welter of disordered information

children suffer more years of exposure to the metabolic syndrome resulting in complications such as diabetes and cardiovascular disease earlier in life In 2013 42 million children under the age of 5 were reported to be overweight or obese In developing countries with emerging economies the rate of increase of childhood overweight and obesity has been more than 30% higher than that of the developed countries Since the global obesity problem is nowhere near a solution the burden will no doubt rise and reach incomprehensible proportions so it is time to act Subject Guide to Books in Print ,1971
