

Lab #4: Monocot and Dicot Roots, Stems, and Leaves

65 Points

BACKGROUND: Plant Organs

Plant cells go together to form tissues (cells that work together) and the tissues go together to form organs (tissues that work together). There are two different classes of flowering plants called monocots and dicots. For the purposes of this class, you can think of the monocots as mostly being the grasses and all other flowering plants as being dicots. They differ considerably in their tissue arrangements and basic design, so we will learn the major differences between the two in this course. In this lab we will study the basic anatomy (tissue arrangement) of roots, stems, and leaves. Flowers, fruits, and seeds will be covered in Lab #7.

DIRECTIONS: Read through each part of the lab and complete the labeling and questions. You may use the internet or the Chapter 3 Part 2 Power Point to help with this lab. Be careful to read and complete each part below. Fill in the text boxes for each question. You must first download this lab, fill in the answers, save it to your computer, then upload it in Assignments. Total points = 65
